

Personal Protective Equipment: The Key to Protecting Yourself

Earplugs

Earplugs/muffs guard against hearing loss.

Stick to 85-decibel limit to avoid hearing damage. (e.g., a chatty room or a dishwasher produces 85 decibels.)

Gloves

Gloves shield hands and fingers from cuts, heat, abrasion, and chemicals, but won't resist all chemicals indefinitely.

Check their condition beforehand.

Wear gloves that fits the size and shape of your hands.

Hard Hats

Hard hats shield from impact and sometimes even electric shock.

Replace impacted hard hats as protection may be compromised.

Eye Wear

Eyewear and goggles shields against debris, dust, and chemicals. It accommodates prescriptions or fits over them.

Boots

Work shoes/boots shield from falling/rolling objects and penetration.

High-ankle boots offer steel/hard-toe protection and slip-resistance like shoes while preventing ankle injuries that cause strains.

Assessing the Need for Personal Protective Equipment, 1997 *Certifying Personal Protective Technologies* Institute of Medicine, Board on Health Sciences Policy, Committee on the Certification of Personal Protective Technologies, 2011-04-16

When you purchase a product you expect it to work Construction workers on high rise buildings need to be confident that their safety harnesses will arrest a fall Firefighters need to know that their gloves and other protective equipment can withstand high temperatures Healthcare workers administering highly toxic chemotherapy agents need to know that their gloves will withstand penetration For personal protective technologies PPT where the major purpose of the product is to protect the wearer against a hazard a deficit in product effectiveness can mean injury illness or death Examining the extent to which products meet specific performance or design criteria is the focus of conformity assessment efforts For PPT conformity assessment the ultimate goal is preventing worker illness injury or death from hazardous working conditions Certifying Personal Protective Technologies focuses on conformity assessment for occupational PPT ensuring that PPT are effective in preventing or reducing hazardous exposures or situations that workers face in their jobs Because respirators already have an extensive testing and conformity assessment process in place this book specifically addresses conformity assessment processes for other types of PPT including eye and face protection gloves hearing protectors and protective clothing

Non Usage of Personal Protective Equipment Among Industrial Workers and its Effects Samuel Olufade,2018-01-11
Project Report from the year 2016 in the subject Organisation and administration Disaster control grade 3 56 course
Environmental Health language English abstract Personal protective devices are equipment used in industries factories mainly by workers to prevent protect themselves from hazards that may arise during the course of carrying out their duties Personal protective devices are considered as last line of protection or defense for workers against different types of hazards after all engineering measures to minimize or control hazards from the source itself has been exhausted It is worthy to note that industrial evolution has brought great development to the economy of the world at large However the consequence that comes with this development are quite unnoticeable These neglected side effects of industrialization have greatly contributed to the world problems mostly especially on the health of the workers The workers are exposed to various degrees of hazards present or generated in the work environment leading to accidents deafness cuts abrasion blindness respiratory diseases disabilities etc resulting from negligence on the part of the workers non compliance to the rules and regulations guiding industrial processes and mostly the non usage of personal protective devices Generally sawmills as an industry have potential hazards which have imparts or consequences on the workers mostly when personal protective devices are not use Akoti sawmill has provision for personal protective devices but the workers do not make effective use of them which predisposes the workers to hazards which can result into injury cuts deafness blindness impaired hearing heart problems respiratory

diseases headaches dizziness accidents high blood pressure Asthma and all other diseases and disabilities and even so it can also lead to death Therefore awareness should be made so as to protect and promote the health of workers thereby enhancing productivity Personal protective equipment s are equipment s which must be worn by every industrial factories workers before starting handling any factory work some of the personal protective devices include gloves body covering apron boots goggles or face shield head or neck coverings mouth and nose guards etc Based on these observations this prompted me to carry out the research on non usage of personal protective devices so as to know the reason and effects of non usage of those devices equipment by industrial factory workers *FCS Construction Plant and Equipment L2 ,2009*

Guide for the Selection of Personal Protective Equipment for Emergency First Responders Alim A. Fatah,John A. Barrett,Richard D. Arcilesi, Jr.,2003-12-01 The Nat Institute of Justice NIJ provides objective independent evidence based knowledge and tools to meet the challenges of crime and justice particularly at the State and local levels The Office of Law Enforcement Standards OLES of the NIST furnishes technical support to NIJ in the development of standards OLES subjects existing equipment to laboratory testing and evaluation and conducts research leading to the development of nat standards user guides and technical reports This document covers research conducted by OLES It includes information on the selection of personal protective equipment PPE that includes chemical and biological protective clothing and respiratory equipment for different applications **Occupational Hygiene** Kerry Gardiner,J. Malcolm Harrington,2008-04-15 Employees employers and the government have all become very awareof the effects on health of the work environment As a result thissubject area is rapidly developing with recent changes inlegislation sampling and measurement methods as well as a newemphasis on the psychological impact of work and the importance ofan appropriate work life balance The purpose of this book is to provide a clear and conciseaccount of the principles of occupational hygiene and as such itis suitable for students studying for degree courses in thissubject and for the MFOM It is also suitable for occupationalphysicians and nurses to safety representatives and to tradeunionists This edition sees the introduction of nine new chapters coveringrecently emerged topics such as work life balance workorganisation and psychological issues **Preparing for an Influenza Pandemic** Institute of Medicine,Board on Health Sciences Policy,Committee on Personal Protective Equipment for Healthcare Workers During an Influenza Pandemic,2007-12-28 During an influenza pandemic healthcare workers will be on the front lines delivering care to patients and preventing further spread of the disease As the nation prepares for pandemic influenza multiple avenues for protecting the health of the public are being carefully considered ranging from rapid development of appropriate vaccines to quarantine plans should the need arise for their implementation One vital aspect of pandemic influenza planning is the use of personal protective equipment PPE the respirators gowns gloves face shields eye protection and other equipment that will be used by healthcare workers and others in their day to day patient care responsibilities However efforts to appropriately protect healthcare workers from illness or from infecting their families and their patients are greatly hindered by the paucity

of data on the transmission of influenza and the challenges associated with training and equipping healthcare workers with effective personal protective equipment. Due to this lack of knowledge on influenza transmission it is not possible at the present time to definitively inform healthcare workers about what PPE is critical and what level of protection this equipment will provide in a pandemic. The outbreaks of severe acute respiratory syndrome SARS in 2003 have underscored the importance of protecting healthcare workers from infectious agents. The surge capacity that will be required to reduce mortality from a pandemic cannot be met if healthcare workers are themselves ill or are absent due to concerns about PPE efficacy. The IOM committee determined that there is an urgent need to address the lack of preparedness regarding effective PPE for use in an influenza pandemic. *Preparing for an Influenza Pandemic: Personal Protective Equipment for Healthcare Workers* identifies that require expeditious research and policy action:

- 1 Influenza transmission research should become an immediate and short term research priority so that effective prevention and control strategies can be developed and refined. The current paucity of knowledge significantly hinders prevention efforts.
- 2 Employer and employee commitment to worker safety and appropriate use of PPE should be strengthened. Healthcare facilities should establish and promote a culture of safety.
- 3 An integrated effort is needed to understand the PPE requirements of the worker and to develop and utilize innovative materials and technologies to create the next generation of PPE capable of meeting these needs.

Federal Register, 1994-06-10 **Code of Federal Regulations, Title 40, Protection of Environment, Pt. 150-189, Revised As of July 1 2012** Office of the Federal Register (U.S.) Staff, 2012-09-17 **Personal Protective Equipment** U. S. Labor, Occupational Administration, 2012-06-25 OSHA 3151 12R Personal Protection Equipment Hazards exist in every workplace in many different forms: sharp edges, falling objects, flying sparks, chemicals, noise, and a myriad of other potentially dangerous situations. The Occupational Safety and Health Administration (OSHA) requires that employers protect their employees from workplace hazards that can cause injury. Controlling a hazard at its source is the best way to protect employees. Depending on the hazard or workplace conditions, OSHA recommends the use of engineering or work practice controls to manage or eliminate hazards to the greatest extent possible. For example, building a barrier between the hazard and the employees is an engineering control; changing the way in which employees perform their work is a work practice control. When engineering, work practice, and administrative controls are not feasible or do not provide sufficient protection, employers must provide personal protective equipment (PPE) to their employees and ensure its use. Personal protective equipment, commonly referred to as PPE, is equipment worn to minimize exposure to a variety of hazards. Examples of PPE include such items as gloves, foot and eye protection, protective hearing devices, earplugs, muffs, hard hats, respirators, and full body suits. This guide will help both employers and employees do the following: Understand the types of PPE; Know the basics of conducting a hazard assessment of the workplace; Select appropriate PPE for a variety of circumstances; Understand what kind of training is needed in the proper use and care of PPE. The information in this guide is general in nature and does not

address all workplace hazards or PPE requirements The information methods and procedures in this guide are based on the OSHA requirements for PPE as set forth in the Code of Federal Regulations CFR at 29 CFR 1910 132 General requirements 29 CFR 1910 133 Eye and face protection 29 CFR 1910 135 Head protection 29 CFR 1910 136 Foot protection 29 CFR 1910 137 Electrical protective equipment 29 CFR 1910 138 Hand protection and regulations that cover the construction industry at 29 CFR 1926 95 Criteria for personal protective equipment 29 CFR 1926 96 Occupational foot protection 29 CFR 1926 100 Head protection 29 CFR 1926 101 Hearing protection and 29 CFR 1926 102 Eye and face protection and for the maritime industry at 29 CFR 1915 152 General requirements 29 CFR 1915 153 Eye and face protection 29 DFR 1915 155 Head protection 29 CFR 1915 156 Foot protection and 29 CFR 1915 157 Hand and body protection
