Pervasive Computing:

Pervasive Computing Minyi Guo, Jingyu Zhou, Feilong Tang, Yao Shen, 2016-08-05 This book introduces fundamental concepts and theories in pervasive computing as well as its key technologies and applications It explains how to design and implement pervasive middleware and real application systems covering nearly all aspects related to pervasive computing Key technologies in the book include pervasive computing oriented resource management and task migration mobile pervasive transaction human computer interface and context collection oriented wireless sensor networks *Privacy in Mobile and Pervasive Computing* Marc Langheinrich, Florian Schaub, 2022-05-31 It is easy to imagine that a future populated with an ever increasing number of mobile and pervasive devices that record our minute goings and doings will significantly expand the amount of information that will be collected stored processed and shared about us by both corporations and governments The vast majority of this data is likely to benefit us greatly making our lives more convenient efficient and safer through custom tailored and context aware services that anticipate what we need where we need it and when we need it But beneath all this convenience efficiency and safety lurks the risk of losing control and awareness of what is known about us in the many different contexts of our lives Eventually we may find ourselves in a situation where something we said or did will be misinterpreted and held against us even if the activities were perfectly innocuous at the time Even more concerning privacy implications rarely manifest as an explicit tangible harm Instead most privacy harms manifest as an absence of opportunity which may go unnoticed even though it may substantially impact our lives In this Synthesis Lecture we dissect and discuss the privacy implications of mobile and pervasive computing technology For this purpose we not only look at how mobile and pervasive computing technology affects our expectations of and ability to enjoy privacy but also look at what constitutes privacy in the first place and why we should care about maintaining it We describe key characteristics of mobile and pervasive computing technology and how those characteristics lead to privacy implications We discuss seven approaches that can help support end user privacy in the design of mobile and pervasive computing technologies and set forward six challenges that will need to be addressed by future research The prime target audience of this lecture are researchers and practitioners working in mobile and pervasive computing who want to better understand and account for the nuanced privacy implications of the technologies they are creating Those new to either mobile and pervasive computing or privacy may also benefit from reading this book to gain an overview and deeper understanding of this highly interdisciplinary and dynamic field Fundamentals of Mobile and Pervasive Computing Frank Adelstein, Sandeep K. S. Gupta, Golden Richard, Loren Schwiebert, 2005-01-20 The authoritative general reference that has been sorely missing in the field of mobile computing This book teaches all the main topics via the hottest applications in a rapidly growing field Big picture explanations of ad hoc networks and service discovery Exercises projects and solutions to illustrate core concepts Extensive wireless security methodologies **Pervasive Information Systems** Panos E Kourouthanassis, George M Giaglis, 2016-09-16 Today s

ubiquitous computing technology is imbedded in everyday objects from cars to clothes to shipping containers whose location context and state can be monitored instantly processed and acted upon This new volume in the Advances in Management Information Systems series provides an in depth review of the state of the art practices and research opportunities in a new era where information technology resides in physical space Written for both scholars and practitioners Pervasive Information Systems is organized into three sections each investigating a distinct part of the subject Part I focuses on the design challenges of Pervasive Information Systems PS and discusses issues relating to the coordination of PS through middleware structures as well as issues related to the efficient deployment of PS Part II discusses the challenges and limitations of deploying pervasive technologies to support domestic corporate and public systems Part III presents two emerging research fields of PS design for aesthetics and PS evaluation

Pervasive Computing Uwe Hansmann,Lothar Merk,Martin S. Nicklous,Thomas Stober,2003-06-06 This book describes a new class of computing devices which are becoming omnipresent in every day life They make information access and processing easily available for everyone from anywhere at any time Mobility wireless connectivity diversity and ease of use are the magic keywords of Pervasive and Ubiquitous Computing The book covers these front end devices as well as their operating systems and the back end infrastructure which integrate these pervasive components into a seamless IT world A strong emphasis is placed on the underlying technologies and standards applied when building up pervasive solutions These fundamental topics include commonly used terms such as XML WAP UMTS GPRS Bluetooth Jini transcoding and cryptography to mention just a few Voice Web Application Servers Portals Web Services and Synchronized and Device Management are new in the second edition Besides a comprehensive state of the art description of the Pervasive Computing technology itself this book gives an overview of today s real life applications and accompanying service offerings M Commerce e Business networked home travel and finance are exciting examples of applied Ubiquitous Computing

Strategic Pervasive Computing Applications: Emerging Trends Godara, Varuna,2010-02-28 The focus of this book is on the ever increasing capacity of Pervasive context aware applications that are aiming to develop into context responsive applications in different application areas Provided by publisher *Pervasive Computing* Aboul Ella

Hassanien,2009 Pervasive computing also referred to as ubiquitous computing or ambient intelligence aims to create environments where computers are invisibly and seamlessly integrated and connected into our everyday environment Pervasive computing and intelligent multimedia technologies are becoming increasingly important although many potential applications have not yet been fully realized These key technologies are creating a multimedia revolution that will have significant impact across a wide spectrum of consumer business healthcare and governmental domains This useful volume provides up to date and state of the art coverage of the diverse topics related to pervasive computing and intelligent multimedia technologies The use of different computational intelligence based approaches to various problems in pervasive computing are examined including video streaming intelligent behavior modeling and control for mobile manipulators tele gaming indexing video summaries for quick video browsing web service processes virtual environments ambient intelligence and prevention and detection of attacks to ubiquitous databases Topics and features Includes a comprehensive overview providing a thorough literature review and an outline of the important research challenges Discusses pervasive computing approaches in the context of intelligent multimedia Examines virtual reality technology mobile virtual environments and the potential use of intelligent multimedia and ubiquitous computing in the hotels of the future Describes various approaches in ambient intelligence for home health care for the elderly and those suffering from Alzheimer s disease for volcano monitoring and for preventing attacks to ubiquitous databases Investigates issues in web services and situation awareness in pervasive computing environments Explores wireless network applications such as mobile agents and e commerce This textbook reference is an invaluable resource for researchers postgraduate and senior undergraduate students and practitioners involved in pervasive computing intelligent multimedia and computational intelligence

The Landscape of Pervasive Computing Standards Sumi Helal,2022-05-31 This lecture presents a first compendium of established and emerging standards in pervasive computing systems The lecture explains the role of each of the covered standards and explains the relationship and interplay among them Hopefully the lecture will help piece together the various standards into a sensible and clear landscape The lecture is a digest reorganization and a compilation of several short articles that have been published in the Standards and Emerging Technologies department of the IEEE Pervasive Computing magazine The articles have been edited and shortened or expanded to provide the necessary focus and uniform coverage depth There are more standards and common practices in pervasive systems than the lecture could cover However systems perspective and programmability of pervasive spaces which are the main foci of the lecture set the scope and determined which standards should be included The lecture explains what it means to program a pervasive space and introduces the new requirements brought about by pervasive computing Among the standards the lecture covers are sensors and device standards service oriented device standards service discovery and delivery standards service gateway standards and standards for universal interactions with pervasive spaces In addition the emerging sensor platform and domestic robots technologies are covered

and their essential new roles explained The lecture also briefly covers a set of standards that represents an ecosystem for the emerging pervasive healthcare industry Audiences who may benefit from this lecture include 1 academic and industrial researchers working on sensor based pervasive or ubiquitous computing R 2 system integrator consultants and firms especially those concerned with integrating sensors actuators and devices to their enterprise and business systems 3 device smart chips and sensor manufacturers 4 government agencies 5 the healthcare IT and pervasive health industries and 6 other industries such as logistics manufacturing and the emerging smart grid and environment sustainability industries
