Representations Of Fundamental Groups Of Algebraic Varieties:

Representations of Fundamental Groups of Algebraic Varieties Kang Zuo, 2006-11-14 Using harmonic maps non linear PDE and techniques from algebraic geometry this book enables the reader to study the relation between fundamental groups and algebraic geometry invariants of algebraic varieties The reader should have a basic knowledge of algebraic geometry and non linear analysis This book can form the basis for graduate level seminars in the area of topology of algebraic varieties It also contains present new techniques for researchers working in this area *Algebraic Geometry Santa Cruz 1995* János Kollár, David R. Morrison, 1997

Representation Theory and Algebraic Geometry Vladimir Baranovsky, Nicolas Guay, Travis Schedler, 2022-06-15 The chapters in this volume explore the influence of the Russian school on the development of algebraic geometry and representation theory particularly the pioneering work of two of its illustrious members Alexander Beilinson and Victor Ginzburg in celebration of their 60th birthdays Based on the work of speakers and invited participants at the conference Interactions Between Representation Theory and Algebraic Geometry held at the University of Chicago August 21 25 2017 this volume illustrates the impact of their research and how it has shaped the development of various branches of mathematics through the use of D modules the affine Grassmannian symplectic algebraic geometry and other topics All authors have been deeply influenced by their ideas and present here cutting edge developments on modern topics Chapters are organized around three distinct themes Groups algebras categories and representation theory D modules and perverse sheaves Analogous varieties defined by quivers Representation Theory and Algebraic Geometry will be an ideal resource for researchers who work in the area particularly those interested in exploring the impact of the Russian school

Algebraic Geometry: Salt Lake City 2015 Richard Thomas, 2018-06-01 This is Part 2 of a two volume set Since Oscar Zariski organized a meeting in 1954 there has been a major algebraic geometry meeting every decade Woods Hole 1964 Arcata 1974 Bowdoin 1985 Santa Cruz 1995 and Seattle 2005 The American Mathematical Society has supported these summer institutes for over 50 years Their proceedings volumes have been extremely influential summarizing the state of algebraic geometry at the time and pointing to future developments The most recent Summer Institute in Algebraic Geometry was held July 2015 at the University of Utah in Salt Lake City sponsored by the AMS with the collaboration of the Clay Mathematics Institute This volume includes surveys growing out of plenary lectures and seminar talks during the meeting Some present a broad overview of their topics while others develop a distinctive perspective on an emerging topic Topics span both complex algebraic geometry and arithmetic questions specifically analytic techniques enumerative geometry moduli theory derived categories birational geometry tropical geometry Diophantine questions geometric representation theory characteristic and adic tools etc The resulting articles will be important references in these areas for years to come Representation Theories and Algebraic Geometry A. Broer, 2013-03-09 The 12 lectures presented in Representation Theories and Algebraic Geometry focus on the very rich and powerful interplay between algebraic geometry

and the representation theories of various modern mathematical structures such as reductive groups quantum groups Hecke algebras restricted Lie algebras and their companions This interplay has been extensively exploited during recent years resulting in great progress in these representation theories Conversely a great stimulus has been given to the development of such geometric theories as D modules perverse sheafs and equivariant intersection cohomology The range of topics covered is wide from equivariant Chow groups decomposition classes and Schubert varieties multiplicity free actions convolution algebras standard monomial theory and canonical bases to annihilators of quantum Verma modules modular representation theory of Lie algebras and combinatorics of representation categories of Harish Chandra modules

Geometry of Group Representations William Mark Goldman, Andy R. Magid, American Mathematical Society, 1988 Contains papers based on talks delivered at the AMS IMS SIAM Summer Research Conference on the Geometry of Group Representations held at the University of Colorado in Boulder in July 1987 This work offers an understanding of the state of research in the geometry of group representations and their applications

Current Topics in Complex Algebraic Geometry Charles Herbert Clemens, Janos Kollár, 1995 The 1992-93 academic year at the Mathematical Sciences Research Institute was devoted to complex algebraic geometry This volume collects survey articles that arose from this event which took place at a time when algebraic geometry was undergoing a major change The editors of the volume Herbert Clemens and Janos Kollár chaired the organizing committee This book gives a good idea of the intellectual content of the special year and of the workshops Its articles represent very well the change of direction and branching out witnessed by algebraic geometry in the last few years

Handbook of Geometric Analysis Lizhen Ji, 2008

Geometric Analysis combines differential equations with differential geometry An important aspect of geometric analysis is to approach geometric problems by studying differential equations Besides some known linear differential operators such as the Laplace operator many differential equations arising from differential geometry are nonlinear A particularly important example is the Monge-Ampère equation Applications to geometric problems have also motivated new methods and techniques in differential equations The field of geometric analysis is broad and has had many striking applications This handbook of geometric analysis the first of the two to be published in the ALM series presents introductions and survey papers treating important topics in geometric analysis with their applications to related fields It can be used as a reference by graduate students and by researchers in related areas Back cover

Arithmetic Fundamental Groups and Noncommutative Algebra Michael D. Fried, Yasutaka Ihara, 2002 The arithmetic and geometry of moduli spaces and their fundamental groups are a very active research area This book offers a complete overview of developments made over the last decade The papers

in this volume examine the geometry of moduli spaces of curves with a function on them The main players in Part 1 are the absolute Galois group G of the algebraic numbers and its close relatives By analyzing how G acts on fundamental groups defined by Hurwitz moduli problems the authors achieve a grand generalization of Serre's program from the 1960s Papers in Part 2 apply theta functions and configuration spaces to the study of fundamental groups over positive characteristic fields In this section several authors use Grothendieck's famous lifting results to give extensions to wildly ramified covers Properties of the fundamental groups have brought collaborations between geometers and group theorists Several Part 3 papers investigate new versions of the genus 0 problem In particular this includes results severely limiting possible monodromy groups of sphere covers Finally Part 4 papers treat Deligne's theory of Tannakian categories and arithmetic versions of the Kodaira-Spencer map This volume is geared toward graduate students and research mathematicians interested in arithmetic algebraic geometry

Mathematical Reviews, 2008 *The Many Facets of Geometry* Nigel J. Hitchin, 2010-07 This title celebrates the academic career of Professor Nigel Hitchin one of the most influential figures in the field of differential and algebraic geometry

Transactions of the American Mathematical Society American Mathematical Society, 1900 Monthly journal devoted entirely to research in pure and applied mathematics and in general includes longer papers than those in the Proceedings of the American Mathematical Society

Three-dimensional Orbifolds and Their Geometric Structures Michel Boileau, Sylvain Maillot, Joan Porti, 2003 Orbifolds locally look like quotients of manifolds by finite group actions They play an important role in the study of proper actions of discrete groups on manifolds This monograph presents recent fundamental results on the geometry and topology of 3-dimensional orbifolds with an emphasis on their geometric properties It is suitable for graduate students and research mathematicians interested in geometry and topology

Varieties of Representations of Finitely Generated Groups Alexander Lubotzky, Andy R. Magid, Andy Roy Magid, 1985 The n -dimensional representations over an algebraically closed characteristic zero field k of a finitely generated group are parameterized by an affine algebraic variety over k The tangent spaces of this variety are subspaces of spaces of one cocycles and thus the geometry of the variety is locally related to the cohomology of the group The cohomology is also related to the pronilpotent radical of the proalgebraic hull of the group This paper exploits these two relations to compute dimensions of representation varieties especially for nilpotent groups and their generalizations It also presents the foundations of the theory of representation varieties in an expository self-contained manner

Uniqueness and Non-Uniqueness of Semigroups Generated by Singular Diffusion Operators Andreas Eberle, 1999-11-17 This volume constitutes the thoroughly refereed post-workshop proceedings of an international workshop on fuzzy logic in Artificial Intelligence held in Negoya Japan during IJCAI 97 The 17 revised full papers presented have gone through two rounds of reviewing and revision Three papers by leading authorities in the area are devoted to the general relevance of fuzzy logic and fuzzy sets to AI The remaining papers address various relevant issues ranging from theory to

application in areas like knowledge representation induction logic programming robotics pattern recognition etc

Elemental Methods in Ergodic Ramsey Theory Randall McCutcheon, 1999-12-15 This book constitutes the refereed proceedings of the 5th Biannual German Conference on Knowledge Based Systems XPS 99 held in Würzburg Germany in March 1999 The book presents four invited surveys by leading scientists together with 14 revised full papers selected from more than 50 papers presented at the meeting The papers address research issues in knowledge engineering knowledge based diagnosis knowledge based configuration and case based reasoning as well as advanced applications of knowledge based systems in various fields
