

# ADVANCED OPTOMETRIC TOOLS LEAD THE WAY

Just 6/6 N6 is not enough. Sanjay Mehta from Tower Optics talks about why it's important to care of our eyes. He shares stories and explains how using new tools can help keep our vision healthy

India's population stands at around 1.4 billion and an estimated 50000 people will be added every day in the year 2024. Out of the total current population, around 8 million are blind, half of it being preventable.

In our country as per the latest data available, the current number of Registered Ophthalmologist stands at about 28000 and that of Optometrists stands at about 50000 (14 Year Program) and 20000 (2 Year Program) and approximately 8 lakh optical stores.

Definitely the first place anyone goes for an eye check-up is an optical store because of its convenience in accessing the problem, making it the primary place to detect many eye conditions and diseases like Cataracts, Diabetes Retinopathy, Age-Related Macular

Degeneration, which often develops early signs and symptoms.

Most opticians employ an optometrist just to detect refractive errors like Myopia, Hyperopia, astigmatism, and presbyopia to determine the spectacles and contact lenses. The common question from an optician is why should I improve the eye testing standards in my practice? The answer is why not.

A 42-year-old patient came to my clinic with a common complaint of not being able

to see objects clearly. On examination, she had very negligible distance correction with visual acuity of 6/6 and with normal predominant correction of around 1.25 addition, making her see far clearly.

In normal circumstances, the patient's eye examination and outcome would have ended by prescribing and dispensing the spectacles, but not in my practice. The patient's anterior segment was checked with a 30 Diopter Lens which showed a shallow anterior chamber.

Intraocular pressure was checked with a standard applanation tonometer which showed very high intraocular pressure in both eyes with a wide difference between the two and her retina showed a high cup-to-disc ratio. Her visual field tests showed early glaucoma changes. The patient was immediately referred to an ophthalmologist and her eyes were saved. The above case clearly indicates that there is an urgent need among the optical stores across our country to bring about drastic changes in their

attitude towards what an eye check-up is all about.

In today's digital age, where screen time has become a significant part of daily life, individuals are increasingly prone to digital eye strain and other related issues. Comprehensive eye checkups can assess the impact of prolonged screen use on vision and provide guidance on mitigating potential problems. Additionally, these examinations can lead to recommendations for specialized eyewear or vision therapy to alleviate digital eye strain symptoms.

Different age groups have varying eye care needs. Children may need vision
