Oracle8 and UNIX Performance Tuning Ahmed Alomari, 1999

Oracle High Performance Tuning for 9i and 10g Gavin Powell, 2004 There are three parts to tuning an Oracle database data modeling SQL code tuning and physical database configuration A data model contains tables and relationships between tables Tuning a data model involves normalization and de normalization Different approaches are required depending on the application such as OLTP or a Data Warehouse Inappropriate database design can make SQL code impossible to tune Poor data modeling can have a most profound effect on database performance since all SQL code is constructed from the data model Poorly written SQL code is often a culprit of performance problems and is expensive to rectify However tuning of SQL code is generally cheaper than changing the data model SQL code tends to be contained inside independent blocks within applications or stored procedures

Physical database tuning involves hardware resource usage networking and various other Oracle things such as configuration and file distribution Physical configuration is often a culprit of poor performance where Oracle is installed with defaults and never altered by an expert **Database Performance Tuning and Optimization** Sitansu S.

Mittra,2006-04-18 Scope The book provides comprehensive coverage of database performance tuning and optimization using Oracle 8i as the RDBMS The chapters contain both theoretical discussions dealing with principles and methodology as well as actual SQL scripts to implement the methodology The book combines theory with practice so as to make it useful for DBAs and developers irrespective of whether they use Oracle 8i Readers who do not use Oracle 8i can implement the principles via scripts of their own written for the particular RDBMS they use I have tested each script for accuracy and have included the sample outputs generated from them An operational database has three levels conceptual internal and external The conceptual level results from data modeling and logical database design When it is implemented via an RDBMS such as Oracle it is mapped onto the internal level Database objects of the conceptual level are associated with their physical counterparts in the internal level An external level results from a query against the database and as such provides a window to the database There are many external levels for a single conceptual level **Oracle Performance Tuning 101** Gaja Krishna

Vaidyanatha,Kirtikumar Deshpande,John Kostelac,2001 Tuning Oracle databases or Oracle Performance Management OPM is what database administrators DBAs do to help the database run optimally With the increase in e commerce and deployment of databases and applications on the Internet the task of keeping databases running is becoming increasingly important This entry level study teaches the essentials of keeping databases running at top performance The guide covers releases 7 3 through 8i for NT Linux and Unix platforms OCP Oracle9i Database: Performance Tuning Exam Guide Charles
