

The role of technology and using graphical software in the education process is growing in most fields. Many students are unable to do commercial and business computing & web security software. In the book we have developed applications that implement the usual forms needed in calculus such as functions, limits of functions, differentiation, integrals, and plotting functions in 2D and 3D. The animations were designed to show both an animated book model & show the user to use online and you animated simulations which are in understanding the mathematics subjects. The graphical graphs are easily accessed and can be controlled by a user with the programming language. Mathematics is the foundation of many core concepts in science and engineering. A successful career in science and engineering is possible without a solid mathematical base. However, mathematics are always considered a hard subject because students are unable, and mathematics classes are difficult to explain to students as presented in a paper. Mathematically today's software allows us to bridge the gap and help students master mathematics and learn their own.
