Modern Statistics For Behavioral Sciences:

Modern Statistics for the Social and Behavioral Sciences Rand Wilcox, 2017-08-15 Requiring no prior training Modern Statistics for the Social and Behavioral Sciences provides a two semester graduate level introduction to basic statistical techniques that takes into account recent advances and insights that are typically ignored in an introductory course Hundreds of journal articles make it clear that basic techniques routinely taught and used can perform poorly when dealing with skewed distributions outliers heteroscedasticity unequal variances and curvature Methods for dealing with these concerns have been derived and can provide a deeper more accurate and more nuanced understanding of data A conceptual basis is provided for understanding when and why standard methods can have poor power and yield misleading measures of effect size Modern techniques for dealing with known concerns are described and illustrated Features Presents an in depth description of both classic and modern methods Explains and illustrates why recent advances can provide more power and a deeper understanding of data Provides numerous illustrations using the software R Includes an R package with over 1300 functions Includes a solution manual giving detailed answers to all of the exercises This second edition describes many recent advances relevant to basic techniques For example a vast array of new and improved methods is now available for dealing with regression including substantially improved ANCOVA techniques The coverage of multiple comparison procedures has been expanded and new ANOVA techniques are described Rand Wilcox is a professor of psychology at the University of Southern California He is the author of 13 other statistics books and the creator of the R package WRS He currently serves as an associate editor for five statistics journals He is a fellow of the Association for Psychological Science and an elected member of the International Statistical Institute

Modern Statistics for the Social and Behavioral Sciences Rand Wilcox, 2011-08-05 In addition to learning how to apply classic statistical methods students need to understand when these methods perform well and when and why they can be highly unsatisfactory Modern Statistics for the Social and Behavioral Sciences illustrates how to use R to apply both standard and modern methods to correct known problems with classic techniques Numerous illustrations provide a conceptual basis for understanding why practical problems with classic methods were missed for so many years and why modern techniques have practical value Designed for a two semester introductory course for graduate students in the social sciences this text introduces three major advances in the field Early studies seemed to suggest that normality can be assumed with relatively small sample sizes due to the central limit theorem However crucial issues were missed Vastly improved methods are now available for dealing with non normality The impact of outliers and heavy tailed distributions on power and our ability to obtain an accurate assessment of how groups differ and variables are related is a practical concern when using standard techniques regardless of how large the sample size might be Methods for dealing with this insight are described The deleterious effects of heteroscedasticity on conventional ANOVA and regression methods are much more serious than once thought Effective techniques for dealing

heteroscedasticity are described and illustrated Requiring no prior training in statistics Modern Statistics for the Social and Behavioral Sciences provides a graduate level introduction to basic routinely used statistical techniques relevant to the social and behavioral sciences It describes and illustrates methods developed during the last half century that deal with known problems associated with classic techniques Espousing the view that no single method is always best it imparts a general understanding of the relative merits of various techniques so that the choice of method can be made in an informed manner
