Molecular Biology Of Aging:

Molecular Biology of Aging Avril D. Woodhead, Anthony D. Blackett, Alexander Hollaender, 1985-10-31 It is delightful but humbling to find my face at the start of these Proceedings there are innumerable other faces which could equally well stand there from among the band who have fore gathered at every gerontology conference since the subject was launched in its present form but I deeply appreciate being there Gerontology did not grow by accident Its present standing is the fruit of careful planning undertaken by European and American scientists back in the 1950 s In those days it was still a fringe science and the conspirators had much the standing of the 1920 s Interplanetary Society The United States itself is the offspring of conspiracy for when the results of conspiracy are beneficent the conspirators become Founding Fathers This has been the case with gerontology The present meeting is especially gratifying because the papers have been recitals of normal hard science investigation We had to get through the rigors of a long period of semantic argument and a long period of one shot general theories before this kind of meeting normal in all other research fields could take place It was also necessary to breed in the menagerie a generation of excellent investigators aware of the theoretical background but unintimidated by it who share our conviction that human aging is comprehensible and probably controllable and who go into the laboratory to attack specifics

Molecular Biology of Aging University of California, Los Angeles, 1990 This broad ranging study explores the recent findings in the dynamic field of molecular biogerontology It examines the numerous molecular changes which occur during senescence and pinpoints the basic biological pacemakers of aging Investigators examine the importance of DNA damage and the extent of differential gene expression during aging There are discussions of attempts to manipulate the lifespans of various model organisms through gene transfer and regulated gene expression Throughout the contributors stress that the genome holds the ultimate key to understanding the limits of lifespan and the determinants of senescence

Molecular Biology of Aging, 1992 **Molecular Basis of Aging** A Roy, 2012-12-02 Molecular Basis of Aging is a collection of papers that discuss the molecular aspects of aging in the light of molecular biology biochemical gerontology and genetics Each chapter of the book contains a different study about the topic which includes the effects of aging on DNA synthesis the amplification of extrachromosomal circular copies and mitochondrial DNA during aging and the altered actions of hormones and neurotransmitters during aging The book also encompasses the loss of responsiveness to growth factors in cell senescence the integration of cellular molecular and neuroendocrine concepts of aging changes and inactivation of enzymes during aging and the relationship of aging with free radicals The text is recommended for molecular biologists biochemists and gerontologists who wish to study further the effects of aging on the body on a molecular level [Molecular Biology of Aging](#) R. Handbook of the Biology of Aging Nicolas Musi, Peter Hornsby, 2021-01-19 Handbook of the Biology of Aging Ninth Edition provides a comprehensive synthesis and review of the latest and most important advances and themes in modern biogerontology The book focuses on the trend of big data approaches in the biological sciences presenting new strategies to analyze interpret and understand the enormous amounts of information being generated through DNA sequencing transcriptomic proteomic and metabolomics methodologies applied to aging related problems Sections cover longevity pathways and interventions that modulate aging innovative tools that facilitate systems level approaches to aging research the mTOR pathway and its importance in age related phenotypes and much more Assists researchers in keeping abreast of research and clinical findings outside their subdiscipline Helps medical behavioral and social gerontologists understand what basic scientists and clinicians are discovering Includes new chapters on genetics evolutionary biology bone aging and epigenetic control Examines the diverse research being conducted in the study of the biology of aging

The Biology of Aging John A. Behnke, Caleb Finch, Caleb Ellicott Finch, Gairdner Bostwick Moment, 1978 Abstract Recent research on the physiology biochemistry and molecular biology of the aging process is presented Study of other life forms provides insight into the cellular changes associated with aging in humans Two hypothesis on the nature of aging are debated does each cell have its own biological cells or does a limited group of cells function to regulate aging for the entire body Metabolic aspects of senescence in plants exercise diet drugs hormones genetics and the immune response in relation to aging are examined Physiological changes in the aging brain are described Special problems of old age including biosenescence are discussed

Biology of Aging Roger B. McDonald, 2019-06-07 Biology of Aging Second Edition presents the biological principles that have led to a new understanding of the causes of aging and describes how these basic principles help one to understand the human experience of biological aging longevity and age related disease Intended for undergraduate biology students it describes how the rate of biological aging is measured explores the

mechanisms underlying cellular aging discusses the genetic pathways that affect longevity in various organisms outlines the normal age related changes and the functional decline that occurs in physiological systems over the lifespan and considers the implications of modulating the rate of aging and longevity The book also includes end of chapter discussion questions to help students assess their knowledge of the material Roger McDonald received his Ph D from the University of Southern California and is Professor Emeritus in the Department of Nutrition at the University of California Davis Dr McDonald s research focused on mechanisms of cellular aging and the interaction between nutrition and aging His research addressed two key topics in the field the relationship between dietary restriction and lifespan and the effect of aging on circadian rhythms and hypothalamic regulation You can contact Dr McDonald at rbmcdonald.ucdavis.edu Related Titles Ahmad S I ed *Aging Exploring a Complex Phenomenon* ISBN 978 1 1381 9697 1 Moody H R J Sasser *Gerontology The Basics* ISBN 978 1 1387 7582 4 Timiras P S *Physiological Basis of Aging and Geriatrics* ISBN 978 0 8493 7305 3 *Brain Aging* Hugh C.
