

Nanotechnology: General Information and Background

In [Nanospystems](#), Dr. Drexler proposed and analyzed a variety of molecular machines, including some too large to be specified and analyzed in atomic detail. One such machine was a sorting rotor based upon modulated receptors designed to bind and transport chemical species from a feedstock solution. One of Dr. Drexler's more recent projects has been to design in atomic detail a simpler pump intended to provide some of the functionality of the larger and more complex sorting rotors.

The pump and segment of chamber wall pictured here contain 6165 atoms.

Molecular Manufacturing:

The Potential of Nanotechnology for Molecular Manufacturing Max Nelson, Calvin Shipbaugh, 1995 Nanotechnologies are tools that measure and manipulate phenomena and objects at the nanoscale Molecular manufacturing is the willful use of these two activities to create new objects or phenomena The question of whether it is possible to achieve a stage in the foreseeable future when molecular manufacturing using nanotechnologies might be viable and if so how to develop the field is a point of contention in both scientific and policy circles A framework for understanding the scope of this topic possible benefits development risks and policy options is presented but it is not the intention of the authors to provide a definitive road map for future scientific and technological development nor is it believed by the authors that such a detailed analysis would at present yield a fully credible road map given the immature nature of the field Rather it is the contention of this report that though important breakthroughs have been realized much significant basic and applied research remains to be undertaken to realistically assess the far term viability of many of the emerging concepts However a careful and objective technology feasibility assessment could help stimulate near term interim achievements of great merit while preventing technological surprises from foreign players

Prospects in Nanotechnology Markus Kruppenacker, James Lewis, 1995-02-20 The editors both leaders in the nanotechnology field take readers to the front lines of this exciting new field and discuss actual applications of nanotechnology being used in a variety of industries today including computer design materials and biochemistry

Nanosystems K. Eric Drexler, 1992 This state of the art text reveals the fundamental principles of molecular mechanics and mechanosynthesis first using them to describe simple components then offering a thorough analysis of several systems including nanomechanical computers and molecular factories

Molecular Manufacturing Frank J. Boehm, 2005-12-24 This book explores the revolutionary potential of atomically precise manufacturing technologies to transform global healthcare as well as practically every other sector across society This forward thinking volume examines how envisaged Factory Home systems might enable the cost effective domestic fabrication of among myriad consumer products including nutritious gourmet foods advanced autonomous nanomedical devices that have the capacity to address most health challenges including the disease of aging itself Molecular Manufacturing The Future of Nanomedicine covers cutting edge concepts including DNA based manufacturing quantum nanoscience applications and the democratization of industrial capabilities through molecular manufacturing The book presents compelling arguments for how these technologies might facilitate Global Health Care Equivalency providing equitable access to advanced medical technologies regardless of wealth or geography Intended for researchers healthcare professionals policy makers and technology enthusiasts who are interested in the convergence of nanotechnology nanomedicine and artificial intelligence this book explores how emerging technologies will revolutionize healthcare delivery worldwide
