## **Molecules Of Death:**

*Molecules of Death* Rosemary H. Waring, Glyn B. Steventon, Steve C. Mitchell, 2007 This book has been developed over many years from several popular courses taught to students at both Birmingham and London universities It provides an important step in introducing principles and concepts within the field of toxicology The underlying mechanisms of toxicity are highlighted through examples taken from gases minerals plants fungi bacteria marine creatures industrial chemicals and pharmacological agents In this second edition the text has been completely revised and expanded with the addition of six new chapters carbon monoxide hydrofluoric acid lead mushroom toxins paracetamol paraquat and diquat Each chapter is self sufficient enabling readers to dip into chapters of interest at random without any lack of understanding The book is informative with numerous clinical details and will appeal to those who wish to delve into this fascinating subject

**Apoptosis in Cardiac Biology** Heribert Schunkert,G.A.J. Riegger,2007-06-30 Apoptosis or programmed cell death is increasingly considered to be a major factor in the development and progression of cardiovascular disease In patients with heart failure the activation of apoptosis may result in the loss of irreplaceable cardiac myocytes promoting the clinical course of the syndrome Moreover in the coronary arteries inflammation and apoptosis may weaken critical structures of the vessel wall leading to plaque rupture and subsequently to myocardial infarction Given these deleterious consequences it seems almost paradoxical that programmed cell death is an active process that if initiated under physiological circumstances is essential for both coordinated tissue growth or destruction of malignant cells Apoptosis in Cardiac Biology written by a team of internationally renowned researchers gives a timely synopsis of basic mechanisms cellular and structural targets and finally clinical implications of programmed cell death in the heart The expert authors of this volume give concise overviews on general and cell specific aspects of programmed cell death in cardiac myocytes and fibroblasts as well as in vascular smooth muscle and endothelial cells Furthermore novel therapeutic options arising from the outstanding pathophysiological significance of cardiac apoptosis are presented This comprehensive review of Apoptosis in Cardiac Biology will be of interest to both clinicians and basic researchers who are active in the fields of cardiology and atherosclerosis *Apoptosis: Biology and Mechanisms* Sharad Kumar,2013-11-11 Apoptosis is currently one of the fastest moving fields in biology with spectacular progress made over the past few years in delineating the molecular It is now indisputable that apoptosis mechanisms which underlie this process plays an essential role in normal cell physiology and that aberrant apoptosis can manifest itself in a variety of human disorders Published in two parts Volumes 23 and 24 of the series entitled Results and Problems in Cell Differentiation this is an attempt to bring together many different aspects of apoptosis Given that this is such a vast and rapidly expanding field it is almost impossible to cover everything that is now known about apoptosis in two short books but 1

hope these volumes prove to be a guidepost providing basic essential information on the biology and molecular mechanisms of apoptosis and its implications in some human diseases. As a significant amount of new information on apoptosis is emerging every week it is unrealistic to expect that by the time these two books are published all the articles will deliver up to date information. Nevertheless I believe that the fundamentals of the apoptotic phenomenon are now firmly in place and are discussed at length in various chapters. Readers may find a small degree of overlap between some chapters. This was unavoidable since closely related areas of apoptosis research have been covered by more than one author.
