Ultrasonic and Advanced Methods for Nondestructive Testing and Material Characterization Chi-hau Chen, 2007

Ultrasonic methods have been very popular in nondestructive testing and characterization of materials. This book deals with both industrial ultrasound and medical ultrasound. The advantages of ultrasound include flexibility, low cost, in-line operation, and providing data in both signal and image formats for further analysis. The book devotes 11 chapters to ultrasonic methods. However, ultrasonic methods can be much less effective with some applications. So the book also has 14 chapters catering to other or advanced methods for nondestructive testing or material characterization. Topics like structural health monitoring, Terahertz methods, X-ray, and thermography methods are presented. Besides different sensors for nondestructive testing, the book places much emphasis on signal/image processing and pattern recognition of the signals acquired.

MATERIALS SCIENCE AND ENGINEERING -Volume III Rees D. Rawlings, 2009-12-05. Materials Science and Engineering theme is a component of Encyclopedia of Physical Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS, which is an integrated compendium of twenty-one Encyclopedias. Materials Science and Engineering is concerned with the development and selection of the best possible material for a particular engineering task and the determination of the most effective method of producing the materials and the component. The Theme, with contributions from distinguished experts in the field, discusses Materials Science and Engineering. In this theme, the history of materials is traced, and the concept of structure, atomic structure, microstructure, and defect structure, and its relationship to properties, is developed. The theme is structured in five main topics: Materials Science and Engineering, Optimization of Materials, Properties, Structural and Functional Materials, Materials Processing and Manufacturing Technologies, Detection of Defects, and Assessment of Serviceability. Materials of the Future, which are then expanded into multiple subtopics, each as a chapter. These three volumes are aimed at the following five major target audiences: University and College students, Educators, Professional practitioners, Research personnel, and Policy analysts, managers, and decision makers, and NGOs.
