**Mathematical Programming** William W. Hogan,CALIFORNIA UNIV LOS ANGELES WESTERN MANAGEMENT SCIENCE INST.,1971 Properties of point to set maps are studied from an elementary viewpoint oriented toward applications in mathematical programming A number of different definitions and results are compared and integrated Conditions establishing continuity of supremal value functions and properties of maps determined by inequalities are included Author

**Mathematical Essays: In Honor Of Su Buchin** Chuan-eh Hsiung,1983-12-01 This is a collection of research papers published in various mathematical journals by friends colleagues and former students of Professor Buchin Su in honor of his 80th birthday and 50th year of educational work Professor Su was born in 1902 in Pingyang County Zhejiang Province People's Republic of China He received the degree of Bachelor of Science in mathematics from Tohoku University Sendai Japan in 1927 and the degree of Doctor of Science from the same university in 1931 After returning to China in 1931 he first taught at Zhejiang University in Hangzhou until 1952 when the whole College of Science of Zhejiang University was merged into Fudan University in Shanghai During his 50 years of educational work besides teaching he also has taken up various administrative positions serving as Chairman Dean Vice President and finally the President of Fudan University in 1978 Implicit

Functions and Solution Mappings Asen L. Dontchev,R. Tyrrell Rockafellar,2014-06-18 The implicit function theorem is one of the most important theorems in analysis and its many variants are basic tools in partial differential equations and numerical analysis This second edition of Implicit Functions and Solution Mappings presents an updated and more complete picture of the field by including solutions of problems that have been solved since the first edition was published and places old and new results in a broader perspective The purpose of this self contained work is to provide a reference on the topic and to provide a unified collection of a number of results which are currently scattered throughout the literature Updates to this edition include new sections in almost all chapters new exercises and examples updated commentaries to chapters and an enlarged index and references section **Sequence Transformations** Jean-Paul Delahaye,2012-12-06 The book gives a very clear and concise summary of the important fields of sequence transformations and convergence acceleration methods Some of the outstanding features are precise definitions of algorithmic sequence transformations a study of the power of sequence transformations proof of negative results on acceleration methods namely that some sequence families are not accelerable new algorithms for convergence acceleration in particular automatic selection procedures For researchers and graduate students working in or with convergence acceleration methods and sequence transformations this book is sure to become an important tool This book is a contribution to the theory and practice of convergence acceleration methods It gives a new survey point of view on the subject with positive results new method of acceleration and negative results proofs that

some sequence families are not accelerable

**Theory of Multiobjective Optimization** Yoshikazu Sawaragi, HIROTAKA NAKAYAMA, TETSUZO TANINO, 1985-09-19 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality memory and stationarity methods of system representation with an accuracy that is the best within a given class of models methods of covariance matrix estimation methods for low rank matrix approximations hybrid methods based on a combination of iterative procedures and best operator approximation and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory As a result the book represents a blend of new methods in general computational analysis and specific but also generic techniques for study of systems theory and its particular branches such as optimal filtering and information compression Best operator approximation Non Lagrange interpolation Generic Karhunen Loeve transform Generalised low rank matrix approximation Optimal data compression Optimal nonlinear filtering

*Optimization* Jean-Bapiste Hiriart-Urruty, Werner Oettli, Josef Stoer, 2020-11-26 This book is concerned with tangent cones duality formulas a generalized concept of conjugation and the notion of maxi minimizing sequence for a saddle point problem and deals more with algorithms in optimization It focuses on the multiple exchange algorithm in convex programming
