Voller, Marian Stachowicz, Brian G. Thomas, 1991 **Materials Processing in the Computer Age II** Vaughan R. Voller, Steven P. Marsh, 1994 Computers play a key part in the synthesis control and analysis of materials processes This book explores the role of existing and emerging computer technologies in materials processing operations Topics of discussion include solidification processing solidification phenomena physical modeling measurement and control and electromagnetic and emerging processes Materials Processing in the Computer Age III Vaughan R. Voller, Hani Henein, 2000 The third in a series these symposium proceedings from the 2000 TMS Annual Meeting Exhibition held in Nashville Tennessee USA explore the role of existing and emerging computer technologies in materials processing operations The volume includes state of the art computational applications and focuses on control optimization analysis and innovative teaching and training techniques Coverage includes process modelling use of AI techniques visualization and measurement **Materials Processes** Isaac Minkoff, 2012-12-06 This book is designed to give a short introduction to the field of materials processes for students in the different engineering and physical sciences It gives an overall treatment of processing and outlines principles and techniques related to the different categories of materials currently employed in technology It should be used as a first year text and a selection made of the contents to provide a one or two term course It is not intended to be fully comprehensive but treats major processing topics In this way the book has been kept within proportions suitable as an introductory course The text has been directed to fundamental aspects of processes applied to metals ceramics polymers glassy materials and composites An effort has been made to cover as broad a range of processes as possible while keeping the treatment differentiated into clearly defined types For broader treatments a comprehensive bibliography directs the student to more specialised texts In presenting this overall view of the field of processes the text has been brought into line with current teaching in the field of materials The student of engineering in this way may see the challenge and the advances made in applying scientific principles to modern processing techniques This type of presentation may also be the more exciting one **Advanced Automation Techniques In Adaptive Material Processing** Xiaoqi Chen, Rajagopalan Devanathan, Aik Meng Fong, 2002-09-06 This volume presents the editors research as well as related recent findings on the applications of modern technologies in electrical and electronic engineering to the automation of some of the common manufacturing processes that have traditionally been handled within the mechanical and material engineering disciplines In particular the book includes the latest research results achieved through applied research and development projects over the past few years at the Gintic Institute of Manufacturing Technology Singapore It discusses advanced automation technologies such as in process sensors laser vision systems and laser strobe vision as well as advanced techniques such as sensory signal processing adaptive

process control fuzzy logic neural networks expert systems laser processing control etc The methodologies and techniques are applied to some important material processing applications including grinding polishing machining and welding Practical automation solutions which are complicated by part distortions tool wear process dynamics and variants are explained The research efforts featured in the book are driven by industrial needs They combine theoretical research with practical automation considerations The techniques developed have been either implemented in the factory or prototyped in the laboratory
