Materials And Process Integration For MemS:

Materials & Process Integration for MEMS Francis E. H. Tay, 2013-06-29 The field of materials and process integration for MEMS research has an extensive past as well as a long and promising future Researchers academicians and engineers from around the world are increasingly devoting their efforts on the materials and process integration issues and opportunities in MEMS devices These efforts are crucial to sustain the long term growth of the MEMS field The commercial MEMS community is heavily driven by the push for profitable and sustainable products In the course of establishing high volume and low cost production processes the critical importance of materials properties behaviors reliability reproducibility and predictability as well as process integration of compatible materials systems become apparent Although standard IC fabrication steps particularly lithographic techniques are leveraged heavily in the creation of MEMS devices additional customized and novel micromachining techniques are needed to develop sophisticated MEMS structures One of the most common techniques is bulk micromachining by which micromechanical structures are created by etching into the bulk of the substrates with either anisotropic etching with strong alkali solution or deep reactive ion etching (DRIE) The second common technique is surface micromachining by which planar microstructures are created by sequential deposition and etching of thin films on the surface of the substrate followed by a final removal of sacrificial layers to release suspended structures Other techniques include deep lithography and plating to create metal structures with high aspect ratios LIGA micro electrodischarge machining (J)

chain from silicon ingot growth to device fabrication and integration with sensor actuator controlling circuits Explains the properties manufacturing processing measuring and modeling methods of MEMS structures Reviews the current and future options for hermetic encapsulation and introduces how to utilize wafer level packaging and 3D integration technologies for package cost reduction and performance improvements Geared towards practical applications presenting several modern MEMS devices including inertial sensors microphones pressure sensors and micromirrors Advanced Materials and Technologies for Micro/Nano-Devices, Sensors and Actuators Evgeni Gusev, Eric Garfunkel, Arthur Dideikin, 2010-03-15 A NATO Advanced Research Workshop ARW entitled Advanced Materials and Technologies for Micro Nano Devices Sensors and Actuators was held in St Petersburg Russia from June 29 to July 2 2009 The main goal of the Workshop was to examine at a fundamental level the very complex scientific issues that pertain to the use of micro and nano electromechanical systems MEMS and NEMS devices and technologies in next generation commercial and defen related applications Micro and nano electromechanical systems represent rather broad and diverse technological areas such as optical systems micromirrors waveguides optical sensors integrated subsystems life sciences and lab equipment micropumps membranes lab on chip membranes microfluidics sensors bio sensors chemical sensors gas phase sensors sensors integrated with electronics and RF applications for signal transmission variable capacitors tunable filters and antennas switches resonators From a scientific viewpoint this is a very multi disciplinary field including micro and nano mechanics such as stresses in structural materials electronic effects e g charge transfer general electrostatics materials science surface chemistry interface science nano tribology and optics It is obvious that in order to overcome the problems surrounding next generation MEMS NEMS devices and applications it is necessary to tackle them from different angles theoreticians need to speak with mechanical engineers and device engineers and modelers to listen to surface physicists It was therefore one of the main objectives of the workshop to bring together a multidisciplinary team of distinguished researchers *Materials Science of Microelectromechanical Systems (MEMS) Devices* ,2001 **Handbook of Wafer Bonding** Peter Ramm, James Jian-Qiang Lu, Maaike M.
