CLASS	Advanced Mathematics for 10th Grade

OBJECTIVE

In the 20th century, a committee of the International Astronomical Union took it upon itself to accurately delineate the 88 constellations. It included 48 ancient constellations enumerated by the Greek astronomer Ptolemy, plus 40 new constellations. Each constellation is a region of the sky, and together they cover the entire celestial sphere.

EVALUATION

The star charts represent the position of the stars as we see them from Earth; however, the stars in each constellation may not be close to each other, as some we perceive to be brighter because they are close to the Earth, while others are brighter because they are huge stars. Each constellation is a region of the sky; together they cover the entire celestial sphere.

MATERIALS

1. Aquarius is one of the oldest constellations.
2. Orion is a prominent constellation.
3. Capricornus is the smallest constellation.
4. Aries is one of the zodiac constellations.
5. Cassiopeia.
6. Gemini, its name means "twins" in Latin.
7. Leo.
8. Libra.

TESTING

A constellation consists of visible stars that form a perceived outline or pattern, usually representing an animal, a person or mythological creature.

Not all constellations are visible from any point on Earth, so star maps are divided between the northern and southern hemispheres.

NOTES

A constellation consists of visible stars that form a perceived outline or pattern. The origins of the first constellations date back to prehistoric times. Each constellation is a region of the sky; together they cover the entire celestial sphere. Not all constellations are visible from any point on Earth. A constellation consists of visible stars that form a perceived outline or pattern.
