Singh, 2025-04-25 This volume discusses and analyses the use of quantitative indicators to assess sustainability across sectors with the goal of offering readers the tools to choose and validate indicators Sustainability SU and sustainable development SD are critical for survival of humanity but fraught with

both definitional and measurement issues SU and SD are complex multidimensional processes exhibiting i social cultural and economic variabilities ii a lack of unified definition and iii conceptual vagueness These deficiencies complicate attempts to measure the effectiveness of SU SD efforts and make comparisons across programs and geographies difficult This book explains in clear terms the causes consequences and assessment of SU and SD deficiencies An indicator developed for one geographical or climate region may or may not accurately assess sustainability status of another system in different region That is why in spite of plenty indicators currently available there is a need to validate existing or new indicators to assess sustainability This book develops a database of indicators targeting different aspects of SU and SD and discusses the indicators elasticity range advantages and disadvantages The book also provides theoretical and applied information regarding selection of indicators online and or design new indicators This volume is targeted toward faculty and graduate postgraduate scholars working in research areas relevant to sustainability especially those looking for assessment methodologies and advice on selection and validation of relevant indicators
