Materials For Optoelectronics:

Materials for Optoelectronics Maurice Quillec, 1996-01-31 Optoelectronics ranks one of the highest increasing rates among the different industrial branches This activity is closely related to devices which are themselves extremely dependent on materials Indeed the history of optoelectronic devices has been following closely that of the materials KLUWER Academic Publishers has thus rightly identified Materials for Optoelectronics as a good opportunity for a book in the series entitled Electronic Materials Science and Technology Although a sound background in solid state physics is recommended the authors have confined their contribution to a graduate student level and tried to define any concept they use to render the book as a whole as self consistent as possible In the first section the basic aspects are developed Here three chapters consider semiconductor materials for optoelectronics under various aspects Prof G E Stillman begins with an introduction to the field from the point of view of the optoelectronic market Then he describes how III V materials especially the Multi Quantum Structures meet the requirements of optoelectronic functions including the support of microelectronics for optoelectronic integrated circuits In chapter 2 Prof *Supramolecular Materials for Opto-Electronics* Norbert Koch, 2014-11-07 For years concepts and models relevant to the fields of molecular electronics and organic electronics have been invented in parallel slowing down progress in the field This book illustrates how synthetic chemists materials scientists physicists and device engineers can work together to reach their desired shared goals and provides the knowledge and intellectual basis for this venture Supramolecular Materials for Opto Electronics covers the basic principles of building supramolecular organic systems that fulfil the requirements of the targeted opto electronic function specific material properties based on the fundamental synthesis and assembly processes and provides an overview of the current uses of supramolecular materials in opto electronic devices To conclude a what s next section provides an outlook on the future of the field outlining the ways overarching work between research disciplines can be utilised Postgraduate researchers and academics will appreciate the fundamental insight into concepts and practices of supramolecular systems for opto electronic device integration *Insulating Materials for Optoelectronics* F. Agullç-Lçpez, 1995 This review volume presents new developments in the preparation physical characterization and applications of insulating materials for Optoelectronics Insulators occupy a leading position as laser and optical amplifier hosts electrooptic and acoustooptic modulators frequency doublers and optical parametric oscillators photorefractive devices and radiator detectors These applications rely heavily on the development of advanced techniques for the preparation of both bulk and waveguide structures the adequate knowledge of the microscopic behaviour defects impurities and a thorough understanding of their response to electromagnetic fields All these topics relating basic physicochemical aspects and applied performance are authoritatively discussed in the book
