Magic By Misdirection:

Magic By Misdirection Dariel Fitzkee, 2023-04-21 First published in the US in 1945 Magic by Misdirection applies the psychology of deception to the art of magic The finest minds of magic have recognized it an important and monumental work on the subject It makes clear the psychological devices and methods you can use to deceive your audience Disguise Attention Control Simulation Dissimulation Interpretation Maneuver Pretense Ruse Anticipation Diversion Monotony Premature Consummation Confusion Suggestion and much more Fitzkee supplies practical examples in the form of tricks incorporating and utilizing these principles *Magic by Misdirection by Dariel Fitzkee* Dariel Fitzkee, 1945 **Magic and Misdirection** Monty Witt, 1914-06-15 Misdirection in its simplest sense is diverting an audience members attention away from the secret action Any magician can improve their magic and overall effectiveness by learning the principles of misdirection What you will learn why magicians use misdirection when to use misdirection the principles of misdirection the different types of misdirection used by magicians how to use misdirection with different types of magic the correct timing for misdirection why misdirection works Misdirection is a form of deception in which the attention of an audience is focused on one thing in order to distract its attention from another Managing the audience s attention is the aim of all magicians Misdirection is used by magicians to manipulate the audience s perceptions This leads them to draw false conclusions Misdirection is about making sure that your spectators do not see things you do not want them to see **How Magicians Think** Joshua Jay, 2021-09-28 The door to magic is closed but it s not locked And now Joshua Jay one of the world s most accomplished magicians not only opens that door but brings us inside to reveal the artistry and obsessiveness esoteric history and long whispered about traditions of a subject shrouded in mystery And he goes one step further Joshua Jay brings us right into the mind of a magician how they develop their other worldly skills conjure up illusions and leave the rest of us slack jawed with delight time after time Along the way Jay reveals another kind of secret one all readers will find meaningful even if they never aspire to perform sleight of hand What does it take to follow your heart and achieve excellence In 52 short compulsively readable essays Jay describes how he does it whether it s through the making of illusions the psychology behind them or the way technology influences the world of magic He considers the aesthetics of performance discusses contemporary masters including David Copperfield Penn Teller and David Blaine and details how magicians hone their craft And answers questions like Can a magic trick be too good How do you saw a person in half Is there real magic in the universe The answers like so much in magic and life depend on you *The Psychology of Magic and the Magic of Psychology* Amir Raz, Jay A. Olson, Gustav Kuhn, 2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological

principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception
