

# enameling

things to consider:

what is the metal?

where to enamel?

what colors?

## [ the process ]

### 1. polish the surface

The first step is to ensure that the surface of the item is smooth, otherwise the enamel will come out uneven. If there is any existing enamel, it needs to be removed.

### 2. clean the jewelry

After polishing, the item is placed into an ultrasonic cleaner. The cleaner uses soundwaves to remove all dirt from the piece, as well as polishing residue.

### 3. apply the enameling

The enamel is applied to the areas needing coloration. Depending on the design, this can require a steady hand and meticulous attention to detail.

### 4. cure the enamel

After the enamel is placed onto the surface of the jewelry, the item is sent to a kiln or an oven to bake, which cures the enamel and ensures that it is hard and damage-resistant.

### 5. remove the finished product

Once the baking is finished, the enamel is complete! The item is now ready to wear.
