## **Method In Madness Case Studies In Cognitive Neuropsychiatry:**

Method in Madness Peter W. Halligan, John C. Marshall, 1996-01 In clinical neuropsychiatry case studies provide invaluable demonstrations of the range and types of unusual psychological states that can occur after brain damage In the pursuit of objectivity and scientific respectability however many academic reports of neuropsychiatric disorders appear cold contrived and impersonal The essence and character of the patient s experience and behaviour is easily obscured or even lost a fact that cannot help researchers therapists and other practitioners to relate their conceptual knowledge to the flesh and blood people they meet in their professional lives In practice much of the actual discourse of such patients has been ignored as unworthy of scientific interest This book describes real patients in a clear and jargon free way These cases should serve to reduce the discrepancy between the formal representations of psychiatric illness in the mainstream literature and the reality of people struggling to make sense of their own predicament in everyday life The Handbook of Clinical Neuropsychology

Jennifer Gurd, Udo Kischka, John Marshall, 2012-01-12 Clinical neuropsychology remains one of the fastest growing specialities within clinical psychology neurology and the psychiatric disciplines This second edition provides a practical guide for those interested in the professional application of neuropsychological approaches and techniques in clinical practice

*Reconceiving Schizophrenia* Man Cheung Chung, K. W. M. Fulford, George Graham, 2007 Schizophrenia has been investigated predominantly from psychological psychiatric and neurobiological perspectives This text examines it from a philosophical point of view **Incredible Consequences of Brain Injury** Alexander R. Toftness, 2022-11-11 **Incredible Consequences of Brain Injury** The Ways your Brain can Break explains the acquired brain disorders that can suddenly change a person s life Underlining the intricate workings of the human brain and the amazing things it does every day this book examines what happens when the brain stops functioning as it should Through the use of case studies and historical examples this concentrated collection of different neuropsychological conditions provides the reader a glimpse into the lived experiences of each disorder Each chapter is firmly rooted in relevant neuropsychological literature combined with easy to understand explanations and guided reflection In its essence this book is a celebration of the human brain and the myriad factors that make it up serving to maintain hope in recovering from brain conditions and to marvel at the intricate workings of the brain This valuable compendium is essential for anyone who wants to learn more about how the brain functions and dysfunctions and will be equally useful for students instructors and healthcare workers It will further be of use to individuals with brain conditions and their dear ones and for the individuals who are interested in learning more about the human brain

**Mapping the Mind** Rita Carter, 1999 A smart current and witty introduction to brain science Accompanied by illustrations examples of cutting edge imaging technologies and sidebars by key neuroscientists **Anatomy of an Avatar** Philip Gerrans, 2024-09-04 This book applies a powerful framework in computational neuroscience predictive coding and active inference to explain psychiatric disorders that are characterised by pathologies of self awareness It shows how the self

is best conceived of as an avatar or model made by the brain for the fundamental purpose of optimising basic bodily function. That avatar integrates and coordinates neurocomputation across the mind. It allows the mind to anticipate and respond to sensory information that bears on the organism's prospects. The self is thus a model avatar made by the brain to allow the body to play the game of life. When activity in circuitry that implements the avatar is compromised, a variety of psychiatric disorders result. *Anatomy of an Avatar* provides a theoretical framework for theories of embodied selfhood anchored in homeostatic regulation as well as exploring psychiatric disorders involving the self and the empirical application of concepts of free energy minimisation, active inference and predictive processing. The book also includes key case studies in the cognitive neuropsychiatry of self-awareness and test cases for philosophical concepts of self-representation and the experience of self-awareness. The book will be essential reading for those in the fields of psychology and consciousness, psychiatry and philosophy.

**Prophets, Cults and Madness** Anthony Stevens, John Price, 2000. A fascinating look into cults and mass leadership, exploring the depths of the psychology and sexuality behind such famous or notorious leaders as Hitler, David Koresh and Jesus.

**Into the Silent Land** Paul Broks, 2003. Paul Broks draws on his 15 years as a neuropsychologist to present a narrative about memory and personal identity. Macabre yet humane, unsettling but affecting, he writes about the experiences of his patients and his experience as their psychologist. The stories are those of ordinary people whose extraordinary illnesses have much to say to everyone about who and what we are. They are also about chance, compassion, human fallibility and eccentricity.

**Creativity, Madness and Civilisation** Richard Pine, 2007. What is creativity? And what is madness? How far can we interpret an artist's work through our knowledge of his or her mental state and how far can we infer a mental state from a work of art? When does a work of art cease to be a personal statement by the artist and become a matter of public concern? The contributions to this book attempt to answer some of these questions. They come from a wide range of disciplines and experiences: a practising psychiatrist, a practising artist suffering from reactive depression and critics working in literature, film, music and the visual arts. The essays include discussions of the myth of creativity, the music of Robert Schumann, the borders of sanity in the writing of Lawrence Durrell, the insane truth of Virginia Woolf, the meeting of doctor and patient in the poetry of Anne Sexton, mood disorders in the fiction of David Foster Wallace, love and madness in the poetry of Hafiz of Shiraz and the paintings of Adolf Wölfli. Central to this discussion of creativity, madness and civilisation is the difficulty of establishing an appropriate and effective vocabulary and mindset between critics and clinical psychiatrists which would enable them to work together in understanding mental disturbance in creative artists.

**The Handbook of Memory Disorders** Alan D. Baddeley, Michael D. Kopelman, Barbara A. Wilson, 2002-11-22. Disorders of memory are among the most frequent and disabling symptoms of a wide range of clinical disorders. Leading scientists and clinicians review the theoretical concepts and research which contribute to an understanding of this field. *Psychiatry*, 2000.
