High-Performance Parallel Database Processing and Grid Databases David Taniar, Clement H. C. Leung, Wenny Rahayu, Sushant Goel, 2008-09-17 The latest techniques and principles of parallel and grid database processing The growth in grid databases coupled with the utility of parallel query processing presents an important opportunity to understand and utilize high performance parallel database processing within a major database management system DBMS This important new book provides readers with a fundamental understanding of parallelism in data intensive applications and demonstrates how to develop faster capabilities to support them It presents a balanced treatment of the theoretical and practical aspects of high performance databases to demonstrate how parallel query is executed in a DBMS including concepts algorithms analytical models and grid transactions High Performance Parallel Database Processing and Grid Databases serves as a valuable resource for researchers working in parallel databases and for practitioners interested in building a high performance database It is also a much needed self contained textbook for database courses at the advanced undergraduate and graduate levels

Parallel and Distributed Processing and Applications Jiannong Cao, Laurence T. Yang, Minyi Guo, Francis Lau, 2005-01-17 Welcome to the proceedings of the 2nd International Symposium on Parallel and Distributed Processing and Applications ISPA2004 which was held in Hong Kong China 13-15 December 2004 With the advance of computer networks and hardware technology parallel and distributed processing has become a key technology which plays an important part in determining future research and development activities in many academic and industrial branches It provides a means to solve computationally intensive problems by improving processing speed It is also the only approach to building highly reliable and inherently distributed applications ISPA2004 provided a forum for scientists and engineers in academia and industry to exchange and discuss their experiences new ideas research results and applications about all aspects of parallel and distributed computing There was a very large number of paper submissions 361 from 26 countries and regions including not only Asia and the Pacific but also Europe and North America All submissions were reviewed by at least three program or technical committee members or external reviewers It was extremely difficult to select the presentations for the conference because there were so many excellent and interesting submissions In order to allocate as many papers as possible and keep the high quality of the conference we finally decided to accept 78 regular papers and 38 short papers for oral technical presentations We believe that all of these papers and topics not only provide novel ideas new results work in progress and state of the art techniques in this field but also stimulate the future research activities in the area
