Recent Trends in Data Type Specification Donald Sannella, 1988 The Fifth Workshop on Specification of Abstract Data Types took place 1 4 September 1987 in Gullane near Edinburgh This book contains papers based on selected talks presented at the workshop The algebraic specification of abstract data types has been a flourishing topic in computer science since 1974 The main goal of work in this area is to evolve a methodology to support the design and formal development of reliable software The particular approach taken builds upon concepts from universal algebra and elementary category theory The core of this work has now stabilized to a great extent and is mature enough to find application in real life software engineering and to related topics such as concurrency databases and even hardware design Such applications are becoming more feasible because of the emergence of integrated specification development environments which include tools such as theorem provers based on fast term rewriting engines Researchers are also exploring ways of widening the scope of the theory to make it applicable to for example higher order functions and non deterministic programs Another trend is toward taking a more general view which allows superficially different approaches having the same general aims and methods to be unified

Software Reliability Modelling and Identification Sergio Bittanti, 1988-12-21 This volume contains five tutorial papers based on the lectures given at the intensive course on

Software Reliability Modelling and Identification in Como Italy from September 2 to 4 1987 The purpose of this volume is to present some important models used to forecast the reliability growth during the software testing process and discuss the practical applicability of models in the management of software techniques for model identification from data parameter estimation complexity selection validation etc The basic reliability concepts are also introduced for those readers who are not familiar with the reliability ideas Besides the basic models a new family of models is introduced in the book This family is flexible enough to describe a variety of different reliability trends Particular attention is given to the problem of the provision of tools to assist the user in selecting an appropriate model in a particular situation

Notes on Set Theory Josep Díaz, 1989 The axiomatic theory of sets is a vibrant part of pure mathematics with its own basic notions fundamental results and deep open problems It is also viewed as a foundation of mathematics so that to make a notion precise simply means to define it in set theory This book gives a solid introduction to pure set theory through transfinite recursion and the construction of the cumulative hierarchy of sets and also attempts to explain how mathematical objects can be faithfully modeled within the universe of sets In this new edition the author has added solutions to the exercises and rearranged and reworked the text to improve the presentation

Advances in Object-Oriented Database Systems Klaus R. Dittrich, 1988 This volume collects papers presented at the 2nd International Workshop on Object Oriented Database Systems ooDBS II held at the Ebernburg near Bad M nster am Stein FRG in September 1988 It thus gives a comprehensive overview of the latest developments in this flourishing area of current

database research Object oriented database systems have been approached with mainly two major intentions in mind namely to better support new application areas like CAD CAM office automation knowledge engineering and to overcome the impedance mismatch between data models and programming languages The notion of object orientation in database systems is thus a broader one than e g in the area of programming languages Structural object orientation provides for data model mechanisms that allow the direct representation and manipulation of highly structured entities behavioral object orientation cares for facilities to associate arbitrary user defined type specific operations with data entities finally full object orientation tries to combine the advantages of both categories Though data model concepts are the decisive feature of object oriented database systems numerous other system aspects have to be reconsidered or allow better solutions respectively in this light They include e g transactions implementation techniques optimization formalization the inclusion of rules and the integration with other systems A number of research prototypes and even some commercial systems are meanwhile available Both approaches to extend databases with object oriented capabilities and approaches to extend object oriented programming languages with database features have been and are being investigated

Advances in Cryptology--EUROCRYPT '88
Christoph G. Günther, 1988 The International Association for Cryptologic Research (IACR) organizes two international conferences every year one in Europe and one in the United States EUROCRYPT '88 held in the beautiful environment of the Swiss mountains in Davos was the sixth European conference The number of contributions and of participants at the meeting has increased substantially which is an indication of the high interest in cryptography and system security in general The interest has not only increased but has also further moved towards authentication signatures and other protocols This is easy to understand in view of the urgent needs for such protocols in particular in connection with open information systems and in view of the exciting problems in this area The equally fascinating classical field of secrecy 2 e the theory design and analysis of stream or block ciphers and of public key cryptosystems was however also well represented and several significant results were communicated The present proceedings contain all contributions which were accepted for presentation The chapters correspond to the sessions at the conference
