Namazi,1994 This text introduces and investigates estimation algorithms for signal registration Signal registration can be defined as the problem of estimating a varying displacement between two random processes This problem has great importance in many applications perhaps the most familiar of which lies in the field of passive sonar The bearing of the signal source is related to the time delay displacement between two random waveforms In the general signal registration problem the time delay is itself a random function of time Part one of this book is devoted to the problem of variable time delay estimation Another application of the signal registration lies in image processing where registration is called motion estimation By determining the relative displacement motion between the intensities of consecutive image frames one can encode an image more efficiently In this application the displacement is a position dependent vector process Part two discusses the problem of nonuniform image motion estimation     Forthcoming Books Rose Arny,1995-02     **UCLA Computer Science Annual** ,1991     **Robot Kinematics** Chung You Ho,Jen Sriwattanathamma,1990 This volume is a unified treatment of the field of robot kinematics based upon symbolic automation and numerical synthesis approaches It focuses on visualizing the robot kinematic mechanisms formulating suitable mathematical models for analyzing the behaviour of industrial manipulators and deriving efficient algorithms for obtaining the solutions     The Cumulative Book Index ,1997 A world list of books in the English language     Proceedings of the ISMM International Conference: Parallel and Distributed Computing, and Systems R.
