## **Partial Connections:**

*Partial Connections* Marilyn Strathern, 1991 This book challenges the routine ways in which anthropologists have thought about the complexity and quantity of their materials Marilyn Strathern focuses on a problem normally regarded as commonplace that of scale or proportion She combines a wide ranging interest in current theoretical issues with a minute attention to the cultural details of social life attempting to conserve a sense of proportion between them Strathern gives equal weight to two areas of contemporary debate One concerns the writing of anthropology and the representation of societies where all lives seem complex the other the future of cross cultural comparison in a field where too much seems known The ethnographic focus of this book Melanesian anthropology exemplifies the levels and contexts through which Melanesianists have managed the complexity of their own accounts while at the same time unfolding an indigenous commentary on proportion and the mixing of forms She reveals unexpected replications in modes of thought and in the presentation of images that remain to be explained In doing so Strathern has fashioned a unique contribution to the anthropological corpus *Partial Connections* is volume 3 in the Association for Social Anthropology of Oceania Special Publications series

**Parabolic Geometries I** Andreas Čap, Jan Slovák, 2024-07-29 Parabolic geometries encompass a very diverse class of geometric structures including such important examples as conformal projective and almost quaternionic structures hypersurface type CR structures and various types of generic distributions The characteristic feature of parabolic geometries is an equivalent description by a Cartan geometry modeled on a generalized flag manifold the quotient of a semisimple Lie group by a parabolic subgroup Background on differential geometry with a view towards Cartan connections and on semisimple Lie algebras and their representations which play a crucial role in the theory is collected in two introductory chapters The main part discusses the equivalence between Cartan connections and underlying structures including a complete proof of Kostant's version of the Bott Borel Weil theorem which is used as an important tool For many examples the complete description of the geometry and its basic invariants is worked out in detail The constructions of correspondence spaces and twistor spaces and analogs of the Fefferman construction are presented both in general and in several examples The last chapter studies Weyl structures which provide classes of distinguished connections as well as an equivalent description of the Cartan connection in terms of data associated to the underlying geometry Several applications are discussed throughout the text
