Schopper,2011-01-21 Competent experts provide a summary of the enormous progress achieved in the development of new detection methods of charged and neutral particles and photons These achievements were initiated by the advent of new

particle colliders e g the LHC at CERN but also by non accelerator experiments The present 2nd part of the handbook is devoted to the integration of detectors in large experiments detectors for special applications as well as the application of detectors in other fields like e g medicine biology applied physics and industry

Production and Neutralization of Negative Ions and Beams Martin P. Stockli, 2007-08-30 The reported advances with small sources of negative ions especially negative hydrogen ions drive the progress of many accelerators and enable new research methods and technologies Large sources of negative deuterium ions are being developed for the international experimental fusion reactor ITER that will require 40 MW of plasma heating The developments increasingly use computer modeling to understand the underlying physics improve existing and develop new technologies
