

Meromorphic Continuation of Multivariable Euler Products and Applications.

Gautami Bhowmik* & Driss Essouabri[†] & Ben Lichtin[‡]

February 1, 2008

Abstract. This article extends classical one variable results about Euler products defined by integral valued polynomial or analytic functions to several variables. We show there exists a meromorphic continuation up to a presumed natural boundary, and also give a criterion, à la Estermann-Dahlquist, for the existence of a meromorphic extension to \mathbb{C}^n . Among applications we deduce analytic properties of height zeta functions for toric varieties over \mathbb{Q} and group zeta functions.

Mathematics Subject Classifications: 11M41, 11N37, 14G05, 32D15.

Key words: several variables zeta functions, Euler product, analytic continuation, Manin's conjecture, Rational points, zeta functions of groups.

Introduction:

There are two fundamental problems in the study of Dirichlet series that admit an Euler product expansion in a region of absolute convergence. The first problem is to prove the existence of a meromorphic continuation into a larger region. Assuming this is possible, the second problem is to describe precisely the boundary of the domain for this meromorphic function. For Dirichlet series in one variable, the first important results go back to Esterman [13] who proved that if $h(Y) = \sum_d F(d)Y^d$, where $F(d)$ is a "ganzwertige" polynomial and $F(0) = 1$, then $Z(s) = \prod_p h(p^{-s})$ is absolutely convergent for $\Re(s) > 1$ and can be meromorphically continued to the half plane $\Re(s) > 0$. Moreover, $Z(s)$ be continued to the whole complex plane if and only if $h(Y)$ is a cyclotomic polynomial. Subsequently, Dahlquist [6] extended this result to h any analytic function with isolated singularities within the unit circle.
