Metaheuristics Computer Decisionmaking:

Metaheuristics Mauricio G.C. Resende, J. Pinho de Sousa, 2003-11-30 Combinatorial optimization is the process of finding the best or optimal solution for problems with a discrete set of feasible solutions Applications arise in numerous settings involving operations management and logistics such as routing scheduling packing inventory and production management location logic and assignment of resources The economic impact of combinatorial optimization is profound affecting sectors as diverse as transportation airlines trucking rail and shipping forestry manufacturing logistics aerospace energy electrical power petroleum and natural gas telecommunications biotechnology financial services and agriculture While much progress has been made in finding exact provably optimal solutions to some combinatorial optimization problems using techniques such as dynamic programming cutting planes and branch and cut methods many hard combinatorial problems are still not solved exactly and require good heuristic methods Moreover reaching optimal solutions is in many cases meaningless as in practice we are often dealing with models that are rough simplifications of reality The aim of heuristic methods for combinatorial optimization is to quickly produce good quality solutions without necessarily providing any guarantee of solution quality Metaheuristics are high level procedures that coordinate simple heuristics such as local search to find solutions that are of better quality than those found by the simple heuristics alone Modern metaheuristics include simulated annealing genetic algorithms tabu search GRASP scatter search ant colony optimization variable neighborhood search and their hybrids

Metaheuristics Marco Caserta, Stefan Voß, 2016-01-07 This volume is centered on exemplifying how metaheuristics have acquired a prominent role in supporting the decision making process of practitioners dealing with complex real world problems arising in different fields and realms of application The conference was centered on presenting original and innovative approaches dealing with metaheuristic algorithms from two broad perspectives Application oriented perspective A large number of contributions can be labelled application oriented since they present successful application of metaheuristics to real world problems arising in different fields Methodological perspective In line with recent trends in metaheuristics researchers have devoted a great deal of attention to the hows and whys of metaheuristics studying e.g. what is the impact of a given feature of a metaheuristic on the final performance of the algorithm how to fine tune and calibrate a metaheuristic how to properly design and combine neighborhoods and so forth The conference was organized for the benefit of researchers and practitioners from 25 different countries A total of 117 attendees were present for the conference in Hamburg During the conference a total of 94 presentations were given in these subject areas representing both research and applications Of these 37 papers were submitted for publication in the post conference volume These papers were peer reviewed resulting in a select number of high quality papers that are represented in this volume The organization of this volume follows the more general structure of the conference itself The volume can be broadly divided into two main sections Methodology and Applications Within each chapter of the Methodology section the

reader is driven inside a metaheuristic with the aim of grasping how and why a certain feature works how neighborhoods can be effectively designed combined and implemented how a metaheuristic should be fine tuned along with other methodological issues The focus of these chapters lies more on the metaheuristic itself as opposed to a more application oriented approach of the second part of the book The second part of the book Applications presents a number of contributions that illustrate how metaheuristics have been successfully employed to tackle either classical problems from the literature or real world problems from the industry

An Introduction to Metaheuristics for Optimization Bastien Chopard,Marco Tomassini,2018-11-02 The authors stress the relative simplicity efficiency flexibility of use and suitability of various approaches used to solve difficult optimization problems The authors are experienced interdisciplinary lecturers and researchers and in their explanations they demonstrate many shared foundational concepts among the key methodologies This textbook is a suitable introduction for undergraduate and graduate students researchers and professionals in computer science engineering and logistics

Metaheuristics for Business Analytics Abraham Duarte,Manuel Laguna,Rafael Marti,2017-11-24 This essential metaheuristics tutorial provides descriptions and practical applications in the area of business analytics It addresses key problems in predictive and prescriptive analysis while also illustrating how problems that arise in business analytics can be modelled and how metaheuristics can be used to find high quality solutions Readers will be introduced to decision making problems for which metaheuristics offer the most effective solution technique The book not only shows business problem modelling on a spreadsheet but also how to design and create a Visual Basic for Applications code Extra Material can be downloaded at <http://extras.springer.com> 978 3 319 68117 7
