Metallic Materials Specification Handbook:

Metallic Materials Specification Handbook R. B. Ross,1980 Metallic Materials Specification Handbook Robert Ballantyne Ross,1980-02-01 Metallic Materials Specification Handbook R.B. Ross,2013-11-27 **Metallic Materials Specification Handbook** Ross RB.,1980 Metallic Materials Specification Handbook R.B. Ross,1991-12-31 It is now ten years since the third edition of *Metallic Materials* and over twenty since the first edition. Over this period the work has been extensively used as a comprehensive source book by all those concerned with the use of engineering materials. Since the third edition there have been a number of basic changes in the methods of specifying materials. Probably the most important of which is the introduction of the Unified Numbering System UNS. These codes are issued in agreement between the Society of Automotive Engineers SAE and the American Society for Testing and Materials ASTM and reflect the acknowledgement of a need for a numbering system with some logic. The UNS codes have been issued to cover all the trade names codes and specifications used in the US and cognizance has been taken of codes used in other areas. The codes have a letter prefix A for aluminium C for copper etc followed by a 5 figure code. This refers to a basic analysis and lists US specifications and trade names covered by this analysis. This edition of *Metallic Materials* lists approximately 4 000 UNS codes and refers the reader either to the basic analysis for this code or to one of the existing specifications or trade names covered by the code. In this edition steps have been taken to update the trade names and specifications to eliminate mistakes and to supply as much contemporary information as possible. The extent of the additions has made it necessary to examine the way that some of the specifications are known under various designations and the implications of this examination are explained in the How to use this book section.
