

THE IMPORTANCE OF Environmental Management in Mining

The responsible management of natural resources and ecosystems is central to a sustainable future.

The IGF Guidance for Governments, Environmental Management and Mining Governments identifies four key issues to consider in the holistic management of the environment in mining.

ISSUE #1: WATER

Effectively and equitably manage the quantity and quality of water resources for all users and the ecosystems they depend on.

Governments must regulate the extraction of valuable water resources at the watershed level and manage water use, water discharges and water quality.

Mining operations use large amounts of water to:

- 1 Process ore
- 2 Supply camp operations
- 3 Treat mine effluent
- 4 Transport away

ISSUE #2: MINE WASTE

Ensure the long-term physical and chemical stability of all mine waste, including:

- 1 Waste rock
- 2 Tailings and related facilities
- 3 Spent heap leach pads and facilities
- 4 Sludges and precipitates from water treatment or mineral recovery
- 5 Dust

Waste systems and facilities must be engineered to minimize the risk of failure and minimize the risk and exposure to people, land, agriculture, vegetation, and animals.

ISSUE #3: EMERGENCY PREPAREDNESS & RESPONSE

Ensure that all stakeholders are well prepared to prevent, address, respond to and recover from emergencies.

National governments must ensure that all potentially affected stakeholders identify and understand potential risks across the mine life cycle, and that they are well prepared to address and respond to them. Emergency preparedness and response programs should include:

- 1 Risk assessment
- 2 Preparedness and prevention plans
- 3 Response plans
- 4 Recovery plans
- 5 Crisis communications plans

ISSUE #4: BIODIVERSITY

Protect biodiversity, ecosystems and the services they provide.

Mining projects can have direct and indirect impacts on biodiversity and ecosystem services, including:

- 1 Habitat loss
- 2 Ecosystem fragmentation and degradation
- 3 Water, air, soil and noise pollution
- 4 Human population growth
- 5 Increased hunting, fishing, gathering and land clearance for agriculture
- 6 Unintentional introduction of invasive species

National governments should enact policies that follow the mitigation hierarchy to avoid and minimize their impacts.
