Department of Computer Science,1991 Physical devices are represented as objects instances of subclasses of the abstract Device class Both control and data operations are requested through method invocation on Device objects Device subclasses are reusable across different architectures and controllers The DevicesController class which acts as server for Devices encapsulates the architectural and controller dependencies The separation of reusable machine independent and machine dependent characteristics leads to flexible and reusable device drivers     **Proceedings** ,1992     *Summer Conference Proceedings* ,1993     **Comparative Performance Evaluation of Garbage Collection Algorithms** Benjamin Zorn,1989 Abstract This thesis shows that object level trace driven simulation can facilitate evaluation of language runtime systems and reaches new conclusions about the relative performance of important garbage collection algorithms In particular I reach the unexpected conclusion that mark and sweep garbage collection when augmented with generations shows comparable CPU performance and much better reference locality than the more widely used copying algorithms In the past evaluation of garbage collection algorithms has been limited by the high cost of implementing the algorithms Substantially different algorithms have rarely been compared in a systematic way
