**Numerical Analysis for Statisticians** Kenneth Lange, 1999 Numerical analysis is the study of computation and its accuracy stability and often its implementation on a computer This book focuses on the principles of numerical analysis and is intended to equip those readers who use statistics to craft their own software and to understand the advantages and disadvantages of different numerical methods *Numerical Analysis for Statisticians* Kenneth Lange, 2014-01-15

**Numerical Analysis for Statisticians** Kenneth Lange, 2010 Every advance in computer architecture and software tempts statisticians to tackle numerically harder problems To do so intelligently requires a good working knowledge of numerical analysis This book equips students to craft their own software and to understand the advantages and disadvantages of different numerical methods Issues of numerical stability accurate approximation computational complexity and mathematical modeling share the limelight in a broad yet rigorous overview of those parts of numerical analysis most relevant to statisticians In this second edition the material on optimization has been completely rewritten There is now an entire chapter on the MM algorithm in addition to more comprehensive treatments of constrained optimization penalty and barrier methods and model selection via the lasso There is also new material on the Cholesky decomposition Gram Schmidt orthogonalization the QR decomposition the singular value decomposition and reproducing kernel Hilbert spaces The discussions of the bootstrap permutation testing independent Monte Carlo and hidden Markov chains are updated and a new chapter on advanced MCMC topics introduces students to Markov random fields reversible jump MCMC and convergence analysis in Gibbs sampling *Numerical Analysis for Statisticians* can serve as a graduate text for a course surveying computational statistics With a careful selection of topics and appropriate supplementation it can be used at the undergraduate level It contains enough material for a graduate course on optimization theory Because many chapters are nearly self contained professional statisticians will also find the book useful as a reference Kenneth Lange is the Rosenfeld Professor of Computational Genetics in the Departments of Biomathematics and Human Genetics and the Chair of the Department of Human Genetics all in the UCLA School of Medicine His research interests include human genetics population modeling biomedical imaging computational statistics high dimensional optimization and applied stochastic processes Springer previously published his books *Mathematical and Statistical Methods for Genetic Analysis* 2nd ed *Applied Probability and Optimization* He has written over 200 research papers and produced with his UCLA colleague Eric Sobel the computer program Mendel widely used in statistical genetics *Numerical Methods of Statistics* John F. Monahan, 2011 This book explains how computer software is designed to perform the tasks required for sophisticated statistical analysis For statisticians it examines the nitty gritty computational problems behind statistical methods For mathematicians and computer scientists it looks at the application of mathematical tools to statistical problems The first half of the book offers a basic background in numerical analysis that emphasizes issues important to statisticians The next several chapters cover a

broad array of statistical tools such as maximum likelihood and nonlinear regression The author also treats the application of numerical tools numerical integration and random number generation are explained in a unified manner reflecting complementary views of Monte Carlo methods Each chapter contains exercises that range from simple questions to research problems Most of the examples are accompanied by demonstration and source code available from the author's website New in this second edition are demonstrations coded in R as well as new sections on linear programming and the Nelder Mead search algorithm
