You can use iteration to find approximations for $f(x) = 0$, to any desired degree of accuracy...

$$x_1 = 4 - \frac{1}{x_0}$$

$$x_0 = 3$$

$$x_1 = 4 - \frac{1}{3}$$

$$x_1 = 3.666666...$$

b) Use the iteration formula:

$$x_{n+1} = 4 - \frac{1}{x_n}$$

$$x_2 = 4 - \frac{1}{3.66...}$$

$$x_2 = 3.72727272...$$

to find, to 2 decimal places, a root of the equation:

$$x_3 = 4 - \frac{1}{3.727...}$$

$$x_3 = 3.73170731...$$

$$x^2 - 4x + 1 = 0$$

$$\text{Use } x_0 = 3$$

You do not need to write this out every single time, but a few examples are needed

$$x_4 = \underline{3.732026144...}$$

$$x_5 = \underline{3.732049037...}$$

$$x_6 = \underline{3.73205068...}$$

After a few iterations, the first few decimal places stop changing

→ 3.73 to 2dp

Numerical Methods In Chemistry:

Numerical Methods in Chemistry Kenneth Jeffrey Johnson, 1980 **INTRODUCTION TO NUMERICAL METHODS IN CHEMICAL ENGINEERING, SECOND EDITION** AHUJA, PRADEEP, 2019-08-01 This book is an exhaustive presentation of the applications of numerical methods in chemical engineering. Intended primarily as a textbook for B.E. B.Tech and M.Tech students of chemical engineering, the book will also be useful for research and development process professionals in the fields of chemical, biochemical, mechanical and biomedical engineering. The book, now in its second edition, comprises three parts. Part I on General Chemical Engineering is same as given in the first edition of the book. It explains solving linear and non-linear algebraic equations, chemical engineering thermodynamics problems, initial value problems, boundary value problems and topics related to chemical reaction, dispersion and diffusion as well as steady and transient heat conduction. Whereas Part II and Part III comprising two chapters and six chapters respectively are newly introduced in the present edition. Besides three appendices covering computer programs have been included. For practice, the book provides students with numerous worked-out examples and chapter-end exercises including their answers. **NEW TO THE SECOND EDITION** Part II on Fixed Bed Catalytic Reactor consists of solving multiple gas phase reactions in a PFR, diffusion and multiple reactions in a catalytic pellet and fixed bed catalytic reactor with multiple reactions. Part III on Multicomponent Distillation consists of solving vapour-liquid-liquid isothermal flash using NRTL model, adiabatic flash using Wilson model, bubble point method, theta method and Naphtali Sandholm method for distillation using modified Raoult's law with Wilson activity coefficient model. [Numerical Methods and Modeling for Chemical Engineers](#) Mark E. Davis, 2013-11-19 This text introduces the quantitative treatment of differential equations arising from modeling physical phenomena in chemical engineering. Coverage includes recent topics such as ODE IVPs emphasizing numerical methods and modeling of 1984 era commercial mathematical software. [Maths in Chemistry](#) Prerna Bansal, 2024-09-02 Numerical methods are the mathematical procedures that approximate the solution of complex mathematical problems into much simpler form and which find a wide variety of use while solving complex Physical Chemistry problems. This book aims to aid in understanding of such numerical methods including solving complex differential equations and numerical differentiation, integration. Moreover, it also explains various statistical tests used in Analytical Chemistry for data analysis. The author has tried to include as many examples from Chemistry problems for a better understanding of the methods. **Computational Chemistry** Anthony Charles Norris, 1981 **Tensor Numerical Methods in Quantum Chemistry** Venera Khoromskaia, Boris N. Khoromskij, 2018-06-11 The conventional numerical methods when applied to multidimensional problems suffer from the so-called curse of dimensionality that cannot be eliminated by using parallel architectures and high performance computing. The novel tensor numerical methods are based on a smart rank-structured tensor representation of the multivariate functions and operators discretized on Cartesian grids, thus reducing solution of the multidimensional

integral differential equations to 1D calculations We explain basic tensor formats and algorithms and show how the orthogonal Tucker tensor decomposition originating from chemometrics made a revolution in numerical analysis relying on rigorous results from approximation theory Benefits of tensor approach are demonstrated in ab initio electronic structure calculations Computation of the 3D convolution integrals for functions with multiple singularities is replaced by a sequence of 1D operations thus enabling accurate MATLAB calculations on a laptop using 3D uniform tensor grids of the size up to 1015 Fast tensor based Hartree Fock solver incorporating the grid based low rank factorization of the two electron integrals serves as a prerequisite for economical calculation of the excitation energies of molecules Tensor approach suggests efficient grid based numerical treatment of the long range electrostatic potentials on large 3D finite lattices with defects The novel range separated tensor format applies to interaction potentials of multi particle systems of general type opening the new prospects for tensor methods in scientific computing This research monograph presenting the modern tensor techniques applied to problems in quantum chemistry may be interesting for a wide audience of students and scientists working in computational chemistry material science and scientific computing Computational Chemistry A.
