

Nursing Process

INTRODUCTION

Scientific endless variety of situations. In every clinical situation it is important for a nurse to think critically and make sound judgments, so that the client ultimately receives the best nursing care. The nursing process is a variation of scientific reasoning that allows nurses to organize and systematize nursing practice. The nurse makes inferences about the meaning of a client's response to health problems or generalizes about the client's functional state of health. A pattern will begin to form and the nurse continues to collect more information elaborating it into a nursing process using her/his critical thinking skills. Critical thinking is an active, organized, cognitive process used to carefully examine one's thinking and the thinking of others. It is more than just problem solving, it is an attempt to continually improve, how to apply oneself when faced with problems in client care.

HISTORICAL PERSPECTIVE

Nursing process can be seen throughout the history of nursing. During the time of Hippocrates, when the profession of medicine evolved, the profession of nursing evolved simultaneously because every ill person needed someone to care. Initially, it was family member later replaced by men and women from various religious orders. Thus, trial and error method was the most common form of early problem solving in client care. Florence Nightingale introduced the concept of formal training for nurses which equipped the nurses to think critically and approach the problem.

Today's nursing process, as we know it, has evolved over many years. In 1955, Hall first described nursing as a process, then over the next few years the actual steps were identified by different nurses. In 1967, Yura and Walsh identified the four step, assessment, planning, implementation and evaluation. During mid 1970s other nurses added a fifth step that of diagnosis. Since the use nursing process has been clearly recognized as the guiding framework for nursing practice.

DEFINITION

The nursing process is a problem-solving approach used by nurses to meet the need of the client. It is a deliberate method that relies on the use of cognitive, interpersonal and psychomotor skills.

- Yura and Walsh describe the nursing process as a set of actions to assist the clients in maintaining optimal wellness.
- ANA defines - the nursing process is used to identify, diagnose and treat human responses to health and illness. It is a dynamic continuous process, which allows a nurse to modify care as the clients need changes. The use of nursing process promotes individualized nursing care and assists the nurse to respond to client's needs in a timely and reasonable manner.

CHARACTERISTICS OF NURSING PROCESS

- Data from each phase provide input to the next phase. Nursing process is a regularly repeated event or sequence of events (a cycle) that is continuously changing (dynamic) rather than staying the same (static).
- The nursing process is client centered. It organizes plan of care according to client problems rather than nursing goals.
- It is an adaptation of problem-solving and system theory. It is directed towards a client's response to illness.
- Decision making is involved in every phase of nursing process.
- Nursing process is interpersonal and collaborative. Nurse communicates with patient and family directly and consistently to meet their needs.

Nursing Process Handbook
