Harnessing the Genie Office of Air Force History,United States Air Force,2015-02-23 This monograph on the forecasting of long range Air Force science began as an attempt to describe the five major scientific studies undertaken by the U S Army Air Forces USAAF U S Air Force USAF since the end of World War II These reports included Toward New Horizons 1945 the Woods Hole Summer Studies 1957 1958 Project Forecast 1964 New Horizons II 1975 and Project Forecast II 1986 They seemed at first to represent nothing more than isolated efforts to predict the technological future But shortly after initiating research on the subject it became clear that several themes linked the five reports Rather than a collection of unrelated analyses common threads were seen to run through them The realization of this pattern was surprising Taken at face value the reports

appeared to be entirely different They were not produced in any one place they were not directed by people with similar backgrounds or educations Both in number and type of participants they differed widely Methodologies were not at all uniform Their conclusions varied significantly In fact they did not even have the same purposes Toward New Horizons was initiated to summarize the most advanced air power technologies of World War II and project them into the future The Woods Hole Summer Studies organized hundreds of academic scientists to predict the short and long term military uses of space Project Forecast had the mandate of revitalizing Air Force thinking by linking national policy issues to scientific vistas and new weapon systems New Horizons II endeavored to point the way toward technological improvements in a period of expected scarcity Finally Project Forecast II sought to infuse the Air Force laboratories with new avenues of basic science research Thus for a variety of internal and external reasons at roughly ten year intervals since the Second World War the Air Force launched major science and technology forecasts
