specific computing environment The expanded second edition contains a number of revisions and additions which incorporate numerous new results obtained during the last few years New algorithms invented since 1997 such as Matula s bipartite method another table based method due to Ercegovac Lang Tisserand and Muller as well as a new chapter on multiple precision arithmetic have been added In addition the section on correct rounding of elementary functions has been fully reworked also in the context of new results Finally the introductory presentation of floating point arithmetic has been expanded with more emphasis given to the use of the fused multiply accumulate instruction The book is an up to date presentation of information needed to understand and accurately use mathematical functions and algorithms in computational work and design Graduates professionals and researchers in scientific computing software engineering and computer engineering will find the book a useful reference and resource
