Recruiting for Uncle Sam David R. Segal,1989 Which citizens have fought America s wars Which ones should fight in the future and how should they be recruited Should military or other national service be an obligation for every citizen David Segal s probing look at the complex issues behind these questions tells us much about the changing manpower needs of our armed forces and about the evolution of civil military relations in the United States Segal analyzes the mobilization contributions and limitations of drafted reservist and volunteer forces from the early days of the republic to the present In the process he shows how Americans have come to separate the benefits of citizenship from service to their country Symptomatic of this separation is the current reliance on an all volunteer military a system that treats military service more as an occupation and opportunity for self advancement than as a civic duty and obligation Drawing on a vast interdisciplinary literature in

American history sociology political science and economics Segal illuminates the ways demographics weapons technology international relations scientific management and social policies have all affected the composition of America's armed forces He also shows how the military anticipated and expanded the American welfare system and played a pivotal role in creating better opportunities for minorities and women The capabilities and performance of U S armed forces in future conflicts will depend on a thorough understanding of and informed response to the crucial manpower issues Segal discusses His thoughtful study should be required reading for military professionals and policymakers and will be of interest to anyone concerned about the future of this country's armed forces

Genes in Development Eva M. Neumann-Held, Christoph Rehmann-Sutter, 2006 In light of scientific advances such as genomics predictive diagnostics genetically engineered agriculture nuclear transfer cloning and the manipulation of stem cells the idea that genes carry predetermined molecular programs or blueprints is pervasive Yet new scientific discoveries such as rna transcripts of single genes that can lead to the production of different compounds from the same pieces of dna challenge the concept of the gene alone as the dominant factor in biological development Increasingly aware of the tension between certain empirical results and interpretations of those results based on the orthodox view of genetic determinism a growing number of scientists urge a rethinking of what a gene is and how it works In this collection a group of internationally renowned scientists present some prominent alternative approaches to understanding the role of dna in the construction and function of biological organisms Contributors discuss alternatives to the programmatic view of dna including the developmental systems approach methodical culturalism the molecular process concept of the gene the hermeneutic theory of description and process structuralist biology None of the approaches cast doubt on the notion that dna is tremendously important to biological life on earth rather contributors examine different ideas of how dna should be represented evaluated and explained Just as ideas about genetic codes have reached far beyond the realm of science the reconceptualizations of genetic theory in this volume have broad implications for ethics philosophy and the social sciences Contributors Thomas Berglin Brian C Goodwin James Griesemer Paul Griffiths Jesper Hoffmeyer Evelyn Fox Keller Gerd B Müller Eva M Neumann Held Stuart A Newman Susan Oyama Christoph Rehmann Sutter Sahotra Sarkar Jackie Leach Scully Gerry Webster Ulrich Wolf
