In this ambitious volume of new work, Mario Biagioli and Peter Galison have brought together historians of science, literary historians, and historians of the book. Together they track the changing nature and identity of the author in science, both historically and conceptually, from the emergence of scientific academies in the age of Galileo to concerns with large-scale multiauthorship and intellectual property rights in the age of cloning labs and pharmaceutical giants. How, for example, do we decide whether a chemical compound is discovered or invented? What does it mean to patent genetic material? Documenting the emergence of authorship in the late medieval period, authorship's limits and its fragmentation, Scientific Authorship offers a collective history of a complex relationship.

Scientific Authorship Credit And Intellectual Property In Science:

Scientific Authorship Mario Biagioli, Peter Galison, 2014-01-27 Since the seventeenth century our ideas of scientific authorship have expanded and changed dramatically In this ambitious volume of new work Mario Biagioli and Peter Galison have brought together historians of science literary historians and historians of the book Together they track the changing nature and identity of the author in science both historically and conceptually from the emergence of scientific academies in the age of Galileo to concerns with large scale multiauthorship and intellectual property rights in the age of cloning labs and pharmaceutical giants How for example do we decide whether a chemical compound is discovered or invented What does it mean to patent genetic material Documenting the emergence of authorship in the late medieval period authorship s limits and its fragmentation Scientific Authorship Mario Biagioli, Peter Galison, 2014-01-27 Since the seventeenth century our ideas of scientific authorship have expanded and changed dramatically In this ambitious volume of new work Mario Biagioli and Peter Galison have brought together historians of science literary historians and historians of the book Together they track the changing nature and identity of the author in science both historically and conceptually from the emergence of scientific academies in the age of Galileo to concerns with large scale multiauthorship and intellectual property rights in the age of cloning labs and pharmaceutical giants How for example do we decide whether a chemical compound is discovered or invented What does it mean to patent genetic material Documenting the emergence of authorship in the late medieval period authorship s limits and its fragmentation Scientific Integrity and Research Ethics David Koepsell, 2016-12-22 This book is an easy to read yet comprehensive introduction to practical issues in research ethics and scientific integrity It addresses questions about what constitutes appropriate academic and scientific behaviors from the point of view of what Robert Merton called the ethos of science In other words without getting into tricky questions about the nature of the good or right as philosophers often do Koepsell s concise book provides an approach to behaving according to the norms of science and academia without delving into the morass of philosophical ethics The central thesis is that since we know certain behaviors are necessary for science and its institutions to work properly rather than pathologically we can extend those principles to guide good behaviors as scientists and academics The Spanish version of this book was commissioned by the Mexican National Science Foundation CONACyT and is being distributed to and used by Mexican scientists in a unique national plan to improve scientific integrity throughout all of Mexico Available now in English the examples and strategies employed can be used throughout the English speaking research world for discussing issues in research ethics training for scientists and researchers across disciplines and those who are generally interested in ethics in academia **Making and Unmaking Intellectual Property** Mario Biagioli, Peter Jaszi, Martha Woodmansee, 2015-07-31 Rules regulating access to knowledge are no longer the exclusive province of lawyers and policymakers and instead

command the attention of anthropologists economists literary theorists political scientists artists historians and cultural critics This burgeoning interdisciplinary interest in intellectual property has also expanded beyond the conventional categories of patent copyright and trademark to encompass a diverse array of topics ranging from traditional knowledge to international trade Though recognition of the central role played by knowledge economies has increased there is a special urgency associated with present day inquiries into where rights to information come from how they are justified and the ways in which they are deployed Making and Unmaking Intellectual Property edited by Mario Biagioli Peter Jaszi and Martha Woodmansee presents a range of diverse and even conflicting contemporary perspectives on intellectual property rights and the contested sources of authority associated with them Examining fundamental concepts and challenging conventional narratives including those centered around authorship invention and the public domain this book provides a rich introduction to an important intersection of law culture and material production

The Hand of Science Blaise Cronin, 2005 Cronin a master of the subject examines the complex relationship between authorship individual or collective and the reward system of science in the face of the burgeoning growth of scholarly communication He answers the myriad questions raised from how responsibility and credit are allocated in collaborative endeavors to what the intellectual property impact could be in online and open access publishing

The Routledge Handbook of Scientific Communication Cristina Hanganu-Bresch, Michael J. Zerbe, Gabriel Cutrufello, Stefania M. Maci, 2021-12-20 Given current science related crises facing the world such as climate change the targeting and manipulation of DNA GMO foods and vaccine denial the way in which we communicate science matters is vital for current and future generations of scientists and publics The Routledge Handbook of Scientific Communication scrutinizes what we value prioritize and grapple with in science as highlighted by the rhetorical choices of scientists students educators science gatekeepers and lay commentators Drawing on contributions from leading thinkers in the field this volume explores some of the most pressing questions in this growing field of study including How do issues such as ethics gender race shifts in the publishing landscape and English as the lingua franca of science influence scientific communication practices How have scientific genres evolved and adapted to current research and societal needs How have scientific visuals developed in response to technological advances and communication needs How is scientific communication taught to a variety of audiences Offering a critical look at the complex relationships that characterize current scientific communication practices in academia industry government and elsewhere this Handbook will be essential reading for students scholars and professionals involved in the study practice and teaching of scientific medical and technical communication

Linnaeus, Natural History and the Circulation of Knowledge Hanna Hodacs, Kenneth Nyberg, Stéphane van Damme, 2018 The name of Carl Linnaeus 1707 1778 is inscribed in almost every flora and fauna published from the mid eighteenth century onwards in this respect he is virtually immortal In this book a group of specialists argue for the need to re-centre Linnaean science and de-centre Linnaeus the man by exploring the ideas practices and people connected to his

taxonomic innovations Contributors examine the various techniques materials and methods that originated within the Linnaean workshop paper technologies publication strategies and markets for specimens Fresh analyses of the reception of Linnaeus s work in Paris K nigsberg Edinburgh and beyond offer a window on the local contexts of knowledge transfer including new perspectives on the history of anthropology and stadial theory The global implications and negotiated nature of these intellectual social and material developments are further investigated in chapters tracing the experiences and encounters of Linnaean travellers in Africa Latin America and South Asia Through focusing on the circulation of Linnaean knowledge and placing it within the context of eighteenth century globalization authors provide innovative and important contributions to our understanding of the early modern history of science *New Directions in Copyright Law* Fiona Macmillan, Kathy Bowrey, 2005 Contains exploration of the themes such as the theoretical framework of copyright and the convergence divergence and globalisation of copyright **Who Owns This Text?** Carol Peterson Haviland, Joan A. Mullin, 2009 Carol Haviland Joan Mullin and their collaborators report on a three year interdisciplinary interview project on the subject of plagiarism authorship and property and how these are conceived across different fields The study investigated seven different academic fields to discover disciplinary conceptions of what types of scholarly production count as owned Less a research report than a conversation the book offers a wide range of ideas and the chapters here will provoke discussion on scholarly practice relating to intellectual property plagiarism and authorship and to how these matters are conveyed to students Although these authors find a good deal of consensus in regard to the ethical issues of plagiarism they document a surprising variety of practice on the subject of what ownership looks like from one discipline to another And they discover that students are not often instructed in the conventions of their major field **Marquette Intellectual Property Law Review** ,2005 **Cambridge Anthropology** ,2004 Commons and Borderlands Marilyn Strathern, 2004 A leading social anthropologist examines early 21st century interests in interdisciplinarity with particular attention to the conjunction of science and society Archaeology *Science-based Innovation* A. Styhre, 2008-02-27 Over the last decade knowledge management has become a well known term but the specific case of science based innovation remains relatively unexploited Bridging this gap between knowledge management theory with studies of science of technology such as in the pharmaceutical industry and biotechnology firms this book provides a timely insight into the innovation of the knowledge economy *E.T. Culture* Debora Battaglia, 2005 Cultural readings of alien encounters *International Bibliography of Book Reviews of Scholarly Literature Chiefly in the Fields of Arts and Humanities and the Social Sciences* ,2004 **The Journal of College and University Law** ,2000 *The Responsibilities of Rhetoric* Rhetoric Society of America.
