Publisher's Note: Although it is unusual for Neonatal Network® to reprint an article, we believe the request by NANN and AWHONN to publish the following article simultaneously with its publication in the Journal of Obstetric, Gynecologic, and Neonatal Nursing (JOGNN) is meritorious. It is our goal to improve the quality of neonatal care. We believe simultaneous publication of this article furthers this goal.

ABSTRACT

Objective: To review the literature addressing the care of neonatal skin.

Data Sources: Computerized searches in MEDLINE and CINAHL, as well as references cited in articles reviewed. Key concepts in the searches included neonatal skin differences; neonatal skin and care practices for skin integrity; neonatal skin and toxicity; permeability; and contact irritant sensitization.

Study Selection: Articles and comprehensive works relevant to key concepts and published after 1963, with an emphasis on new findings from 1993 to 1999. One hundred two citations were identified as useful to this review.

Data Extraction: Data were extracted and organized under the following headings: anatomy and physiology of the skin; physiologic and anatomic differences in neonatal skin; nutritional deficiencies; skin care practices; and care of skin breakdown.

Data Synthesis: Newborns' skin is at risk for disruption of normal barrier function because of trauma. In light of available evidence about differences in neonatal skin development, clinical practice guidelines are suggested for baths, lubrication, antimicrobial skin-disinfection, and adhesive removal. In addition, basic care practices are suggested for maintaining skin integrity, reducing exposure to potentially toxic substances, and promoting skin health beyond the neonatal period. Preventive care recommendations are made for reducing trauma, protecting the skin's immature barrier functions, and promoting skin integrity.

Conclusions: This review generated evidence with which to create a new and comprehensive practice guideline for clinicians. Evaluation of the guideline is under way at 58 U.S. sites.

Accepted for publication February 1999.

THE SKIN IS A VITAL ORGAN WITH MANY ROLES AND functions. These include thermoregulation; provision of a barrier against toxins and infections; water and electrolyte excretion; fat storage and insulation; and tactile sensation. Preserving skin integrity is an important aspect of nursing care across the life span for all patients, but is of particular significance in newborns, who are adapting from the uterine aquatic environment to the aerobic environment.

During care practices such as bathing, lubrication, antimicrobial skin disinfection, and adhesive removal, the skin of newborns is at risk for disruption of normal barrier function and trauma. Although this is particularly true of full-term and premature newborns in the neonatal intensive-care unit (NICU), even well newborns can experience skin disruption and its consequences. For many years, nurses relied primarily on trial and error, traditions, or myths to guide skin care practices. However, heightened interest and concern about neonatal skin, stimulated in part by the increased survival of smaller and less mature newborns, has resulted in research that can guide care.

After a discussion of basic anatomy and physiology, this article reviews the following: (a) current research about skin development and the characteristics of neonatal skin; and (b) basic care practices and their effect on skin integrity, potential for toxicity from permeability, and implications for healthy

Scientific Basis Health Care:

Scientific Basis of Healthcare Colin R. Martin, Victor R. Preedy, 2012-01-18 Healthcare professionals have become more educated in recent years. As such, the demand for comprehensive and focused evidenced-based texts and scientific literature covering single areas of nursing and healthcare science or treatment has also increased. This volume covers a range of issues related to asthma treatment. Topics include asthma care in primary care centers, rhinosinusitis, psychological distress related to asthma, inhalation techniques for different inhalers, emergency treatment for acute asthma, therapy for elderly patients, treatment for pediatric asthma, nursing care at home, and more.

Scientific Basis of Health Services Michael Peckham, Richard Smith, 1997-01-01 We are becoming used to the idea that medical interventions should be based wherever possible on scientific evidence, but the idea that the design and function of health services should also be based on the best scientific evidence is less familiar and more radical. Yet increasingly, politicians, policy makers, managers, and health workers are understanding that modern health services must be based on the best available research evidence. The Scientific Basis of Health Services has grown out of the first major conference to look at how the activities of health services can be rooted in research. Leading figures gathered from over 30 countries to share their experience and ideas. Strong links between science and health care are essential if the outputs of science and technology are to be used to best effect. This groundbreaking book points the way to the future and is essential reading for those designing and managing health services and for those working within them.
