1) a) $f(x) = \tan x + x = 0$ between 2 and 2.5, correct up to 2 decimal places.

Ans) Let, $a = 2$, $b = 3$ $f(3) = \tan 3 + 3$

$$f(2) = \tan 2 + 2 = 2.85$$

$$= -0.19$$

Iteration	a	b	$f(a)$	$f(b)$	$x = \frac{a+b}{2}$	$f(x)$
1	2	3	-0.19	2.85	2.5	1.75
2	2	2.5	-0.18	1.75	2.25	1.01
3	2	2.25	-0.19	1.01	2.12	0.69
4	2	2.12	-0.18	0.69	2.06	0.19
5	2	2.06	-0.18	0.19	2.03	0.007

Hence, a root of the given eq. is 2.03 correct to 2 decimal places.

b) $f(x) = xe^x - 1 = 0$, correct up to 2 decimal places.

Ans) Let, $a = 0$, $b = 1$

$$f(0) = 0e^0 - 1 = -1, \quad f(1) = 1e^1 - 1 = 1.71$$

Iteration	a	b	$f(a)$	$f(b)$	$x = \frac{a+b}{2}$	$f(x)$
1	0	1	-1	1.71	0.5	-0.39

BASIC Numerical Mathematics J. C. Mason, 1983 Basic Numerical Mathematics J. Todd, 2013-03-13 There is no doubt nowadays that numerical mathematics is an essential component of any educational program It is probably more efficient to present such material after a strong grasp of at least linear algebra and calculus has already been attained but at this stage those not specializing in numerical mathematics are often interested in getting more deeply into their chosen field than in developing skills for later use An alternative approach is to incorporate the numerical aspects of linear algebra and calculus as these subjects are being developed Long experience has persuaded us that a third attack on this problem is the best and this is developed in the present two volumes which are however easily adaptable to other circumstances The approach we prefer is to treat the numerical aspects separately but after some theoretical background This is often desirable because of the shortage of persons qualified to present the combined approach and also because the numerical approach provides an often welcome change which however in addition can lead to better appreciation of the fundamental concepts For instance in a 6 quarter course in Calculus and Linear Algebra the material in Volume 1 can be handled in the third quarter and that in Volume 2 in the fifth or sixth quarter

Numerical BASIC Bruce Powel Douglass, 1983 **Basic Numerical Mathematics: Numerical algebra** John Todd, 1978 These two volumes have been designed especially for use as a curricular tool with students who have a strong grasp of the fundamentals of linear algebra vector space basis matrix determinant characteristic values and vectors and calculus particularly convergence and continuity as this text approaches numerical analysis with a program of controlled computational experiments Volume one is a tersely written introduction to numerical

analysis which presents algorithms for root finding interpolation numerical quadrature and the solution of ordinary differential equations Approximately one third of the book is devoted to detailed solutions of selected exercises Volume two introduces the handling of a variety of problems on programmable computers graphing calculators Emphasis is placed on controlled computational experiments comparison of the machine solution of a problem to the theoretical solution as a means of gauging the efficiency of the programs used Also provided are bad examples illustrating the difficulties inherent in the subject

Hydrodynamic Lubrication of Non-Newtonian Fluids Ping Huang, Qianqian Yang, 2022-09-10 Hydrodynamic Lubrication of Non Newtonian Fluids covers basic theory lubrication failure and numerical methods and procedures The title offers a feasible method for solving the hydrodynamic lubrication problem for non Newtonian fluids Whereas hydrodynamic lubrication in Newtonian fluids can be solved using the existing Reynolds equation hydrodynamic lubrication in non Newtonian fluid is much more difficult to solve because the non Newtonian constitutive equation is nonlinear Engineers and technicians working on non Newtonian fluid lubrication calculation and analysis will find this to be an invaluable reference on the latest thinking on hydrodynamic lubrication This book presents a unified solution to hydrodynamic lubrication in non Newtonian fluids proposing a flow separation method In addition the title gives methods and insights into viscosity in non Newtonian fluids the lubrication failure mechanism and fluid lubrication mechanism carrying capacity Offers a solution to hydrodynamic lubrication in non Newtonian fluids Covers a new separation method and sets up an integral differential equation towards a unified method Provides insights into the viscosity of non Newtonian fluids putting forward incremental and full viscosity as important concepts Analyzes the lubrication failure mechanism and fluid lubrication mechanism carrying capacity Presents researchers with a way of calculating and analyzing fluid dynamic pressure lubrication flap lubrication and hot bounce lubrication of common non Newtonian fluids

The Energy Method, Stability, and Nonlinear Convection Brian Straughan, 2013-06-29 This book is a revised edition of my earlier book of the same title The current edition adopts the structure of the earlier version but is much changed The introduction now contains definitions of

stability Chapters 2 to 4 explain stability and the energy method in more depth and new sections dealing with porous media are provided Chapters 5 to 13 are revisions of those in the earlier edition However chapters 6 to 12 are substantially revised brought completely up to date and have much new material in Throughout the book new results are provided which are not available elsewhere Six new chapters 14 19 are provided dealing with topics of current interest These cover the topics of multi component convection diffusion convection in a compressible fluid convection with temperature dependent viscosity and thermal conductivity the subject of penetrative convection whereby part of the fluid layer can penetrate into another nonlinear stability in the oceans and finally in chapter 19 practical methods for solving numerically the eigenvalue problems which arise are presented The book presents convection studies in a variety of fluid and porous media contexts It should be accessible to a wide audience and begins at an elementary level Many new references are provided

Official Gazette of the United States Patent and Trademark Office, 1987 *Psychology and Mathematics Education* Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity
