Read the following paragraph and indentify the parts of the scientific method:

A pharmaceutical company wanted to test a new drug developed to lessen the effects of the common cold. To test this drug, scientists tested fifty volunteers, each of whom was suffering the effects of a cold. Twenty-five of the people were given the drug, while the other twenty five were given a placebo, a sugar pill. None of the participants knew who was which pill. All participants received a pill at 8:00 a.m. daily for the first three days of the study. All participants lived in the same environment, with the same climate, eating the same diet, and having the same level of activity. The severity of the cold, hence the effectiveness of the pill, was determined by the number of tissues each person used within a twenty-four hour period. At the end of a seven-day period it was concluded that those with the sugar pill had their symptoms disappear as well as those who had taken the new wonder drug. The executive committee decided to produce the drug anyway thinking that the public would do anything to relieve the symptoms of a cold.
