Music, Mind, and Brain Manfred Clynes, 2013-06-29 There is much music in our lives yet we know little about its function Music is one of man's most remarkable inventions though possibly it may not be his invention at all like his capacity for language his capacity for music may be a naturally evolved biologic function All cultures and societies have music Music differs from the sounds of speech and from other sounds but only now do we find ourselves at the threshold of being able to find out how our brain processes musical sounds differently from other sounds We are going through an exciting time when these questions and the question of how music moves us are being seriously investigated for the first time from the perspective of the coordinated functioning of the organism the perspective of brain function motor function as well as perception and experience There is so much we do not yet know But the roads to that knowledge are being opened and the coming years are likely to see much progress towards providing answers and raising new questions These questions are different from those music theorists have asked themselves they deal not with the structure of a musical score although that knowledge is important and necessary but with music in the flesh music not outside of man to be looked at from written symbols but music man as a living entity or system

Music, Math, and Mind David Sulzer, 2021-04-27. Why does a clarinet play at lower pitches than a flute? What does it mean for sounds to be in or out of tune? How are emotions carried by music? Do other animals perceive sound like we do? How might a musician use math to come up with new ideas? This book offers a lively exploration of the mathematics, physics, and neuroscience that underlie music in a way that readers without scientific background can follow. David Sulzer, also known in the musical world as Dave Soldier, explains why the perception of music encompasses the physics of sound, the functions of the ear and deep brain auditory pathways, and the physiology of emotion. He delves into topics such as the math by which musical scales, rhythms, tuning, and harmonies are derived, from the days of Pythagoras to technological manipulation of sound waves. Sulzer ranges from styles from around the world to canonical composers to hip-hop, the history of experimental music, and animal sound by songbirds, cetaceans, bats, and insects. He makes accessible a vast range of material, helping readers discover the universal principles behind the music they find meaningful. Written for musicians and music lovers with any level of science and math proficiency, including none. **Music, Math, and Mind** demystifies how music works while testifying to its beauty and wonder.

The Musical Mind John A. Sloboda, 1985. What are the mental processes involved in listening to, performing, and composing music? What is involved in understanding a piece of music? How are such skills acquired? Questions such as these form the basis of the cognitive psychology of music. The author addresses these questions by surveying the growing experimental literature on the subject. The author does not simply review existing research but takes a critical look at what has been achieved in the subject, introducing such topics as composition and musical skill in non-literate cultures. He draws freely on his own knowledge and experience as a practicing musician as well as a psychologist to provide an overview that is scholarly and also accessible to the general reader. From publisher's description.

Beethoven's Anvil William Benzon, 2002. Why does the brain create music? This text argues that the key to music's function lies in the very complexity of musical experience. As well as being both personal and social, the creation of music taps into the whole spectrum of human skills, both physical and mental.

Exploring the Musical Mind John Sloboda, 2005. Brings together in one volume important material from various hard-to-locate sources, giving the reader access to a body of work from one of the founders of music psychology. Complements and updates Sloboda's *The Musical Mind*.

Music and the Mind Owen A. Stradivarius, 1933. Provides an in-depth look at the theory that musical performance and practice can stimulate the human mind and support higher learning and brain function. Particular emphasis is given to the stringed instruments.
