New Horizons In Platelet Activating Factor Research:

New Horizons in Platelet Activating Factor Research C. M. Winslow, Mark L. Lee, 1987 Platelet Activating Factor PAF is a naturally occurring substance with potent biological effects which have a broad significant role in the activation of various inflammatory cells It therefore contributes to a number of serious clinical conditions including anaphylaxis allergic and inflammatory diseases eg asthma rhinitis thrombosis This book brings together leading investigators in the field to present their latest research directed towards the biosynthesis of PAF its cellular origins PAF induced cellular and tissue responses pathophysiological responses and most important to finding effective antagonistic drugs to control this inflammatory mediator

Platelet-Activating Factor and Related Lipid Mediators F. Snyder, 2013-11-11 Platelet activating factor PAF is the commonly used name for a group of potent biologically active ether linked phospholipids the alkylacetyl glycerophospho cholines Following the identification of the chemical structure of P AF in 1979 much progress has been made in our understanding of these phospholipid medi ators This is particularly true from the points of view of their molecular structural requirements for expression of biological activity their biosynthesis and cata bolism their diverse range of biological activities evidence for their specific recep tors at the cell surface the development of specific antagonists for use in receptor studies and for testing as potential anti PAF drugs and implications about their involvement in health and disease Chapters in this book cover the current status of these general areas of PAF research Although an enormous amount of information has been published about this interesting new type of phospholipid mediators questions about their mechanism of action regulatory controls and the precise role and relative importance of P AF in specific diseases and physiological functions remain to be answered Since the 1979 discovery the PAF field has brought together scientists from a variety of different biomedical disciplines The diversity of scientists now in PAF research is very apparent from the number of P AF publications appearing in a wide array of scientific journals ranging from molecular biology to clinical medicine Publications related to PAF continue to increase at an amazingly rapid rate with the pace reminiscent of the period following the discovery of prostaglandins

Handbook of PAF and PAF Antagonists lPierre Braquet, 2019-06-13 Published in 1991 Since its characterization in the 1970s from antigen stimulated rabbit basophils platelet activating factor PAF has been demonstrated to be produced by and act upon a variety of cell types PAF antagonists which have been obtained from both natural sources and chemical synthesis now represent a new class of therapeutic agents and may provide new prospects for treating several major pathologies particularly shock ischemia and asthma This book provides a unique overview of the chemistry molecular modeling pharmacology and clinical potential of the major classes of natural and synthetic PAF antagonists Compounds reviewed include the ginkgolides diketopiperazines neolignans hetrazepines cyclic and 1 3 dioxolan derived PAF analogs pyrrolo 1 2 c thiazoles imidazo 2 1 a isoquinolines and pyridoquinazoline carboxamides Consisting of 12 chapters written by leading experts in PAF antagonist research this book is essential reading for students researchers

Berry, 2013-03-13 The interaction of neurotransmitters neuromodulators and neuroactive drugs with receptors localized at the cell surface initiates a chain of molecular events leading to integrated neuronal responses to the triggering stimuli Major advancements in the characterization and isolation of receptor molecules have answered many questions regarding the nature of the elements that determine the specificity in these interactions At the same time recent studies have provided evidence that delicate regulation by intracellular enzymatic systems determines the efficiency of the stimulus response coupling process mediates the interaction between receptors operates in feedback control mechanisms and transduces signals from the receptors to various effector sites in a highly coordinated fashion These studies are at the focus of the present volume which is an outcome of a symposium held at the University of Vermont College of Medicine on March 21-23 1986 in conjunction with the seventeenth annual meeting of the American Society for Neurochemistry The symposium has demonstrated clearly that the concerted efforts of investigators in neurophysiology biochemistry pharmacology cell biology molecular genetics neurology and psychiatry are required to achieve better understanding of the processes underlying neuronal responsiveness This volume includes contributions provided by prominent investigators in all these research areas We hope that the readers will find here a useful source of information and ideas for stimulating further studies which may serve to narrow the gap between basic neuroscience research and its clinical implications **Lipid Mediators** Fiona M.

Cunningham, 2016-10-27 The Handbook of Immunopharmacology Lipid Mediators covers a comprehensive overview of lipid mediators from synthesis through to inhibition The book discusses the metabolism of arachidonic acid the measurement of fatty acids and their metabolites and the biological properties of cyclooxygenase products The text also describes other essential fatty acids their metabolites and cell-cell interactions the inhibitors of fatty acid derived mediators as well as the biosynthesis and catabolism of platelet activating factor The cellular sources of platelet activating factor and related lipids the biological properties of platelet activating factor and the effects of platelet activating factor receptor antagonists are also considered Immunopharmacologists immunologists and pharmacologists will find the book invaluable Desmopressin in

new information regarding Late Phase Allergic or Inflammatory Reactions LPR It includes present knowledge on the pathogenesis of LPR in human skin nose bronchi and other organ systems The book discusses the roles of antibodies mediators and cells as well as animal models of LPR It describes the importance of LPR in the pathogenesis of chronic disease and the possibilities of their pharmacological modulation The authors discuss clinical conclusions to be drawn from the observation of LPR such as continuous treatment and immunotherapy This volume is a useful reference for scientists and

Inflammation can be defined as a generalized nonspecific but beneficial response of tissues to injury The essential protective role of inflammation can easily be seen in the life threatening genetic diseases in which key elements of the inflammatory reaction are missing or defective The drive to understand the underlying control processes and underlying mechanisms derives however more from the pathological perspective than from elucidating defense of the host to injury and has prompted an enormous effort on the part of the pharmaceutical industry to develop efficient antagonists and inhibitors of the molecules involved in these reactions the inflammatory mediators This volume is intended by the authors to provide information on groups of mediators of inflammation in general and where possible to stimulate interest and comments on the possibilities for participation of these communication molecules mediators in the complex but fascinating process of inflammation *The Journal of Immunology* ,2003 **Field Guide for the Determination of Biological Contaminants in Environmental Samples** American Industrial Hygiene Association.
