New Computer Architectures:

New Computer Architectures Jacques Tiberghien, 1984 **Essentials of Computer Architecture** Douglas Comer, 2024-05-20 This easy to read textbook provides an introduction to computer architecture focusing on the essential aspects of hardware that programmers need to know Written from a programmer's point of view **Essentials of Computer Architecture** Third Edition covers the three key aspects of architecture processors physical and virtual memories and input output I/O systems This third edition is updated in view of advances in the field Most students only have experience with high level programming languages and almost no experience tinkering with electronics and hardware As such this text is revised to follow a top down approach moving from discussions on how a compiler transforms a source program into binary code and data to explanations of how a computer represents data and code in binary Additional chapters cover parallelism and data pipelining assessing the performance of computer systems and the important topic of power and energy consumption Exclusive to this third edition a new chapter explains multicore processors and how coherence hardware provides a consistent view of the values in memory even though each core has its own cache Suitable for a one semester undergraduate course this clear concise and easy to read textbook offers an ideal introduction to computer architecture for students studying computer programming **Computer Architectures for Spatially Distributed Data** Herbert Freeman, G.G. Pieroni, 2013-11-09 These are the proceedings of a NATO Advanced Study Institute ASI held in Cetraro Italy during 6-17 June 1983 The title of the ASI was Computer Architectures for Spatially Distributed Data and it brought together some 60 participants from Europe and America Presented here are 21 of the lectures that were delivered The articles cover a wide spectrum of topics related to computer architecture's specially oriented toward the fast processing of spatial data and represent an excellent review of the state of the art of this topic For more than 20 years now researchers in pattern recognition image processing meteorology remote sensing and computer engineering have been looking toward new forms of computer architectures to speed the processing of data from two and three dimensional processes The work can be said to have commenced with the landmark article by Steve Unger in 1958 and it received a strong forward push with the development of the ILLIAC III and IV computers at the University of Illinois during the 1960's One clear obstacle faced by the computer designers in those days was the limitation of the state of the art of hardware when the only switching devices available to them were discrete transistors As a result parallel processing was generally considered to be impractical and relatively little progress was made *Computer Architecture* John L. Hennessy, David A. Patterson, Krste Asanović, 2012 The computing world is in the middle of a revolution mobile clients and cloud computing have emerged as the dominant paradigms driving programming and hardware innovation This book focuses on the shift exploring the ways in which software and technology in the cloud are accessed by cell phones tablets laptops and more **New Computer Architectures** W. Daniel Hillis, 1986 *Computer Architecture* John L. Hennessy, David A. Patterson, 2011-10-07 *Computer*
