Srikant,Priti Shankar,2002-09-25 The widespread use of object oriented languages and Internet security concerns are just the beginning Add embedded systems multiple memory banks highly pipelined units operating in parallel and a host of other advances and it becomes clear that current and future computer architectures pose immense challenges to compiler designers challenges th **Perspectives of System Informatics** Dines Bjørner,Manfred Broy,Igor V. Pottosin,1996-12-04 This book constitutes the refereed post conference proceedings of the Second International Andrei Ershov Memorial Conference on System Informatics held in Akademgorodok Novosibirsk Russia in June 1996 The 27 revised full papers presented together with 9 invited contributions were thoroughly refereed for inclusion in this volume The book is divided in topical sections on programming methodology artificial intelligence natural language processing machine learning dataflow and concurrency models parallel programming supercompilation partial evaluation object oriented programming semantics and abstract interpretation programming and graphical interfaces and logic programming **Programming Languages for Parallel Processing** David B. Skillicorn,Domenico Talia,1995 Mathematics of Computing Parallelism *ACM Transactions on Programming Languages and Systems* Association for Computing Machinery,2004 *Languages, Compilers and Run-Time Systems for Scalable Computers* Boleslaw K. Szymanski,Balaram Sinharoy,2012-12-06 Language Compilers and Run time Systems for Scalable Computers contains 20 articles based on presentations given at the third workshop of the same title and 13 extended abstracts from the poster session Starting with new developments in classical problems of parallel compiler design such as dependence analysis and an exploration of loop parallelism the book goes on to address the issues of compiler strategy for specific architectures and programming environments Several chapters investigate support for multi threading object orientation irregular computation locality enhancement and communication optimization Issues of the interface between language and operating system support are also discussed Finally the load balance issues are discussed in different contexts including sparse matrix computation and iteratively balanced adaptive solvers for partial differential equations Some additional topics are also discussed in the extended abstracts Each chapter provides a bibliography of relevant papers and the book can thus be used as a reference to the most up to date research in parallel software engineering The

Implementation of Functional Programming Languages Simon L. Peyton Jones, 1987
Constructive Methods for Parallel Programming Sergei Gorlatch, 2002
Functional Programming Languages Kenneth R. Traub, 1991
Modern non strict functional programming languages are a powerful means of programming highly parallel computers but are intrinsically difficult to compile well because decisions about ordering of subcomputations must be taken at compile time This book represents a new technique for compiling such languages by partitioning a program into sequential threads While the interleaving of threads can vary at run time within each thread the order is fixed A program is compiled by analyzing its data dependences and developing from that a set of partitioning constraints These practical algorithms are founded on a new theory of data dependence and ordering within functional programs which defines dependence graphs in terms of a rewrite rule operational semantics for the language By attacking the ordering problem directly the book departs from previous approaches that obtain partitioning as a byproduct of optimizing lazy evaluation and cleanly separates partitioning from other code generation issues Furthermore the method is flexible enough to produce both lazy code and also a less restrictive lenient variant which allows larger threads with only a slight decrease in expressive power Code generation and optimization are explored in depth for both uniprocessor and multiprocessor targets Kenneth R Traub is a researcher with the Motorola Cambridge Research Center Contents Introduction Background Functional Language Compilers Lenient Evaluation Functional Quads Code Generation A Syntactic Theory of Data Dependence Dependence Based Partitioning Conclusion

PARLE '93, Parallel Architectures and Languages Europe Arndt Bode, 1993
Parallel processing offers a solution to the problem of providing the processing power necessary to help understand and master the complexity of natural phenomena and engineering structures By taking several basic processing devices and connecting them together the potential exists of achieving a performance many times that of an individual device However building parallel application programs is today recognized as a highly complex activity requiring specialist skills and in depth knowledge PARLE is an international European based conference which focuses on the parallel processing subdomain of informatics and information technology It is intended to become THE European forum for interchange between experts in the parallel processing domain and to attract both industrial and academic participants with a technical programme designed to provide a balance between theory and practice This volume contains the proceedings of PARLE 93 The PARLE conference came into existence in 1987 as an initiative from the ESPRIT I programme and the format was revised in 1991 92 PARLE 93 is the second conference with the new format and was held in Munich PUBLISHER S WEBSITE
