Milk Quality

**Pennsylvania. Department of
Agriculture**

Milk Quality:

Milk Quality Frank Harding, 1995-12-31 Milk and dairy products are a major part of the human diet in many countries. It is not surprising therefore that considerable attention is paid to obtaining the best possible quality of milk by improving the yield, compositional quality and hygienic quality and minimizing the level of contaminants at all stages of milk production. This book provides easily understood background knowledge of milk quality problems. It identifies the quality parameters of significance and explains what they are, why they are important and how they are measured. Practical help is given for the sampling and testing of milk. Most important of all, the value of good quality milk and how it can be produced and maintained are stressed. This volume is essential reading for dairy scientists and technologists, particularly microbiologists, food processors, quality control personnel, nutritionists and regulatory officials. It will also be an invaluable source of reference for practitioners and researchers in dairy farming and veterinary science. **What is Meant by "quality" in Milk**, 1917

Defining "milk Quality" L. Mataró-Nogueras, 2015 The objective of this thesis is to investigate the meaning of milk quality. For that, two main blocs are analyzed: building the concept of quality and communicating the concept of quality. First of all, to understand how the concept of milk quality is built, an analysis of the dairy actors' perceptions about quality is performed. The goal is to create one big table to summarize such perceptions into four categories: quality in terms of technological components, in terms of hygienic components, in terms of food safety and in terms of sustainability. Each one of these categories has a certain number of indicators that are used to measure the quality perceptions. For such categorization, a deep literature study and the testimony of several dairy actors has been used. Second of all, to understand how the concept of milk quality is communicated, three analyses have been done: an internet-based analysis of retailers and processors' webpages, an analysis of claims, images and labels on pack, and a consumer analysis via questionnaires. For such analysis, the quality categories described in the first bloc were used. The overall findings say that milk quality can be understood as the four perceptions mentioned, which are related to the several dairy actors and which are communicated in specific ways in most of the cases, from processor to consumer, mainly via packaging and using labelling. However, such perceptions are context-related and thus depend on the social construction of the milk quality concept of the country where the analysis takes place. **Improving the Quality of Cream from Inferior Milk** William Dabney Saunders, 1906 Milk
