Bonsall,1997-08-02 Two boys Two balloons Each boy thinks his balloon is best What do you think *Seismicity in Mines* G.  
Gibowicz,2012-12-06 Recent seismological research has focused on processes other than pure shear failure double couple as  
an alternative mechanism for some types of seismic events This has been stimulated by what appears to be anomalous focal  
mechanisms observed for several earthquakes of possible volcanic nature in the 1980 Mammoth Lakes California sequence  
JULIAN and SIPKIN 1985 SIPKIN 1986 Although studies have concentrated on earthquakes associated with magmatic  
processes possible non double couple seismic failure has been observed but not widely known in cases of mine seismicity in  
the past three decades Such cases have occurred on a world wide basis however no cases until now have been observed in  
the United States The existence of non double couple failure in mine seismicity has been controversial as it has been for  
tectonic volcanic earthquakes Several of the benchmark studies of mine seismicity in the deep South African gold mines have  
resulted in the belief that no fundamental distinction in the source mechanism exists between tectonic earthquakes and rock  
bursts MCGARR 1984 both types of events are the result of pure shear failure However the reported cases of implanational  
focal mechanisms for mine seismicity continue to increase in number and prolong the controversy During the summer of  
1984 a three dimensional high resolution micro earthquake network was operated by Woodward Clyde Consultants WCC in  
the vicinity of two coal mines beneath Gentry Mountain in the eastern Wasatch Plateau of central Utah Mines and
