Mathematical Modelling Of Industrial Processes Lecture Notes In Mathematics Volume 1521:

Integral Geometry, Radon Transforms and Complex Analysis Carlos A. Berenstein, Peter F. Ebenfelt, Simon Gindikin, Sigurdur Helgason, Alexander Tumanov, 1998-04-16 This book contains the notes of five short courses delivered at the Centro Internazionale Matematico Estivo session Integral Geometry Radon Transforms and Complex Analysis held in Venice Italy in June 1996 three of them deal with various aspects of integral geometry with a common emphasis on several kinds of Radon transforms their properties and applications the other two share a stress on CR manifolds and related problems All lectures are accessible to a wide audience and provide self contained introductions and short surveys on the subjects as well as detailed expositions of selected results *Flows on 2-dimensional Manifolds* Igor Nikolaev, Evgeny Zhuzhoma, 1999-07-15 Time evolution in low dimensional topological spaces is a subject of puzzling vitality This book is a state of the art account covering classical and new results The volume comprises Poincaré Bendixson local and Morse Smale theories as well as a carefully written chapter on the invariants of surface flows Of particular interest are chapters on the Anosov Weil problem C algebras and non compact surfaces The book invites graduate students and non specialists to a fascinating realm of research It is a valuable source of reference to the specialists **Elliptic Genera and Vertex**

Operator Super-Algebras Hirotaka Tamanoi, 1999-06-21 This monograph deals with two aspects of the theory of elliptic genus its topological aspect involving elliptic functions and its representation theoretic aspect involving vertex operator super algebras For the second aspect elliptic genera are shown to have the structure of modules over certain vertex operator super algebras The vertex operators corresponding to parallel tensor fields on closed Riemannian Spin Kähler manifolds such as Riemannian tensors and Kähler forms are shown to give rise to Virasoro algebras and affine Lie algebras This monograph is chiefly intended for topologists and it includes accounts on topics outside of topology such as vertex operator algebras

Projective Modules and Complete Intersections Satya Mandal, 1997-10-10 In these notes on Projective Modules and Complete Intersections an account on the recent developments in research on this subject is presented The author's preference for the technique of Patching isotopic isomorphisms due to Quillen formalized by Plumsted over the techniques of elementary matrices is evident here The treatment of Basic Element theory here incorporates Plumstead's idea of the generalized dimension functions These notes are highly self-contained and should be accessible to any graduate student in commutative algebra or algebraic geometry They include fully self contained presentations of the theorems of Ferrand Szapiro Cowsik Nori and the techniques of Lindel **LNM**, 1998 Contents of 1 14 1966 67 1978 79 in v 15 1979 80

Mathematical Reviews, 1993 **The Blocking Technique, Weighted Mean Operators and Hardy's Inequality** Karl-Goswin Grosse-Erdmann, 1998-01-19 This book presents the first comprehensive treatment of the blocking technique which consists in transforming norms in section form into norms in block form and vice versa Such norms appear throughout analysis The blocking technique is a powerful yet elementary tool whose usefulness is demonstrated in the book In particular

it is shown to lead to the solution of three recent problems of Bennett concerning the inequalities of Hardy and Copson The book is addressed to researchers and graduate students An interesting feature is that it contains a dictionary of transformations between section and block norms and will thus be useful to researchers as a reference text The book requires no knowledge beyond an introductory course in functional analysis *Directory of Published Proceedings*, 1993

Cubic Metaplectic Forms and Theta Functions Nikolai Proskurin, 1998-01-19 The book is an introduction to the theory of cubic metaplectic forms on the 3 dimensional hyperbolic space and the author's research on cubic metaplectic forms on special linear and symplectic groups of rank 2 The topics include Kubota and Bass Milnor Serre homomorphisms cubic metaplectic Eisenstein series cubic theta functions Whittaker functions A special method is developed and applied to find Fourier coefficients of the Eisenstein series and cubic theta functions The book is intended for readers with beginning graduate level background interested in further research in the theory of metaplectic forms and in possible applications

Schubert Varieties and Degeneracy Loci William Fulton, Piotr Pragacz, 1998-07-16 Schubert varieties and degeneracy loci have a long history in mathematics starting from questions about loci of matrices with given ranks These notes from a summer school in Thurnau aim to give an introduction to these topics and to describe recent progress on these problems There are interesting interactions with the algebra of symmetric functions and combinatorics as well as the geometry of flag manifolds and intersection theory and algebraic geometry **Markov Set-Chains** D. J. Hartfiel, 1998-08-20 This volume

contains recent information on topics of fundamental importance in comparative endocrinology and reproduction It comprises 35 chapters on the following topics hypothalamus and pituitary gonads and reproduction pineal gland hormones and general metabolism The book will be a valuable source of recent information and reference for students teachers and scientists engaged in teaching and research in comparative endocrinology and reproduction *Tomita-Takesaki Theory in Algebras of Unbounded Operators* Atsushi Inoue, 1998-11-18 These notes are devoted to a systematic study of developing the Tomita Takesaki theory for von Neumann algebras in unbounded operator algebras called O algebras and to its applications to quantum physics The notions of standard generalized vectors and standard weights for an O algebra are introduced and they lead to a Tomita Takesaki theory of modular automorphisms The Tomita Takesaki theory in O algebras is applied to quantum moment problem quantum statistical mechanics and the Wightman quantum field theory This will be of interest to graduate students and researchers in the field of unbounded operator algebras and mathematical physics *Algebraic*

Homogeneous Spaces and Invariant Theory Frank D. Grosshans, 1997-11-18 The invariant theory of non reductive groups has its roots in the 19th century but has seen some very interesting developments in the past twenty years This book is an exposition of several related topics including observable subgroups induced modules maximal unipotent subgroups of reductive groups and the method of U invariants and the complexity of an action Much of this material has not appeared previously in book form The exposition assumes a basic knowledge of algebraic groups and then develops each topic
