Pt. 2*, 1968 **Mathematics of the Decision Sciences** George Bernard Dantzig, Arthur F. Veinott, 1968 *Mathematics of the Decision Sciences. P.: 1* George B. Veinott, 1968 *Mathematics of the Decision Sciences*, 1970 **Mathematics In The Decision Sciences ; 002** Dantzig, Mathematics of the Decision Sciences, 1968 **Mathematics of the Decision Sciences, 1** George Bernard Dantzig, Arthur F. Veinott, 1970 **Convexity and Optimization in Finite Dimensions I** Josef Stoer, Christoph Witzgall, 2012-12-06 Dantzig's development of linear programming into one of the most applicable optimization techniques has spread interest in the algebra of linear inequalities the geometry of polyhedra the topology of convex sets and the analysis of convex functions It is the goal of this volume to provide a synopsis of these topics and thereby the theoretical background for the arithmetic of convex optimization to be treated in a subsequent volume The exposition of each chapter is essentially independent and attempts to reflect a specific style of mathematical reasoning The emphasis lies on linear and convex duality theory as initiated by Gale Kuhn and Tucker Fenchel and v Neumann because it represents the theoretical development whose impact on modern optimization techniques has been the most pronounced Chapters 5 and 6 are devoted to two characteristic aspects of duality theory conjugate functions or polarity on the one hand and saddle points on the other The Farkas lemma on linear inequalities and its generalizations Motzkin's description of polyhedra Minkowski's supporting plane theorem are indispensable elementary tools which are contained in chapters 1 2 and 3 respectively The treatment of extremal properties of polyhedra as well as of general convex sets is based on the far reaching work of Klee Chapter 2 terminates with a description of Gale diagrams a recently developed successful technique for exploring polyhedral structures Mathematics of the Decision Sciences, 1968 **Mathematics of the decision sciences. George B. Dantzig and Arthur F. Veinott ... editors. (Reprinted with corrections.)**. American Mathematical Society, George Bernard DANTZIG (and VEINOTT (Arthur F.)), Arthur F. Veinott, 1970 Integer Programming and Related Areas C. Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different

branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries
