Professionalism The Third Logic On The Practice Of Knowledge:

Professionalism Eliot Freidson, 2013-07-10 Eliot Freidson has written the first systematic account of professionalism as a method of organizing work In ideal typical professionalism specialized workers control their own work while in the free market consumers are in command and in bureaucracy managers dominate Freidson shows how each method has its own logic requiring different kinds of knowledge organization career education and ideology He also discusses how historic and national variations in state policy professional organization and forms of practice influence the strength of professionalism In appraising the embattled position of professions today Freidson concludes that ideologically inspired attacks pose less danger to professionals institutional privileges than to their ethical independence to resist use of their specialized knowledge to maximize profit and efficiency without also providing its benefits to all in need This timely and original analysis will be of great interest to those in sociology political science history business studies and the various professions

Professionalism, the Third Logic Eliot Freidson, 2001-06 This new work explores the meaning and implications of professionalism as a form of social organization Eliot Freidson formalizes professionalism by treating it as an ideal type grounded in the political economy he presents the concept as a third logic or a more viable alternative to consumerism and bureaucracy He asks us to imagine a world where workers with specialized knowledge and the ability to provide society with especially important services can organize and control their own work without directives from management or the influence of free markets Freidson then appraises the present status of professionalism exploring how traditional and national variations in state policy and organization are influencing the power and practice of such professions as medicine and law Widespread attacks by neoclassical economists and populists he contends are obscuring the social value of credentialism and monopolies The institutions that sustain professionalism in our world are simply too useful to both capital and state to dismiss

Professional Learning in the Knowledge Society Karen Jensen, Leif Chr. Lahn, Monika Nerland, 2012-10-20 This book presents an entirely new approach to professional learning based on perspectives of the knowledge society and in particular an interpretation of Knorr Cetina's work on scientific epistemic cultures Starting with a conceptual chapter and followed by a suite of empirical studies from accountancy education nursing and software engineering the book elaborates how a knowledge production and circulation take distinct forms in those fields b how the knowledge objects of practice in those fields engross and engage professionals and in the

process people and knowledge are transformed by this engagement By foregrounding an explicit concern for the role of knowledge in professional learning the book goes much farther than the current fashion for describing practice based learning It will therefore be of considerable interest to the research policy practitioner and student communities involved with professional education learning or interested in innovation and knowledge development in the professions

Challenging Future Practice Possibilities Joy Higgs, Steven Cork, Debbie Horsfall, 2019-03-25 What might the futures of practice be like is far from a straightforward question Emphasising the before the word future implies one future But futures thinkers have identified a range of futures that people think about In this book we reflect on possible probable and preferable futures in relation to practice and work Readers are invited to consider how their own engagement in shaping possible futures will support ways of working that they deem preferable even those they can hardly imagine *Challenging Future Practice Possibilities* also examines influences that are maintaining the status quo and others that are pushing interest driven change Authors consider the major challenges that practice and practitioners face today such as wicked problems fears for the future and complex demands and opportunities posed by the digital revolution A number of examples of future oriented work directions such as protean careers and artificial intelligence enhancing or even replacing human workforces are considered along with concerns like the vulnerability of many work situations and workers In some cases workers and employers alike are unprepared for these challenges while others see adapting to these situations as yet another pathway of practice futures evolution
