Mathematics Of Information Processing:

Mathematics of Information Processing Michael Anshel, William Gewirtz, 1986-12-31 These introductory survey lectures the result of a 1984 AMS Short Course focus on the algorithmic problems arising in the construction and utilization of large scale information systems Addressed to both mathematicians and computer scientists the lectures require a background in the methodologies of discrete mathematics in particular the elements of algebra combinatorics and graph theory discrete probability logic and the theory of computation All of the articles either are of high research value or survey profound themes in current research They cover the two fundamental aspects of the field i e database systems and communication networks An overview of database architectures the theory of data dependencies and transaction management are provided respectively by the articles of Jacobs Fagin and Vardi and Garcia Molina Chung evaluates problems in the design of communication networks Miller s discussion of data compression algorithms links current research to classical information theory Finally Tuzhilin describes a general framework evolved in the Soviet Union for modelling problems of information processing
